What the catholic correspondant in Argentina who has supplied this smarthphone pic and all the previous Second Sun videos online at royaldevice.com says about:

A Military Friend of years in this investigation, and that perfectly understands the condition of elevation in degrees and azimuthal radials, he has found several months ago the orbit of the dragon from my telephone directories. I was surprised, I catch it by day. At 15:00 in full sun; And with his cell phone. I want you to take the dimension of what I am talking about. Friends this bis coming to us despite our President Macri continuing to make announcements. Despite the fact that Pope Francisco follows his protocol as if nothing happened. In spite of these rumors of war that we are seeing.

Despite all that is expressed this is day by day closer. Thus the one who knows the orbit of the Dragon, will be able to find it in the blue of the skies from now on. And in a few months[#], I think everyone will see it in the skies of the South and East. This image has touched me deeply, much in spite of my 13 years of research. I only comply with informing, it is my moral duty and I fulfill the mission. God be with us. regards

[#]my note: I personally think in 3 or 4 weeks or less. Its too near now. In fact the CROp was indicating the 1st May date (visible in the sky), while a body is indicated very near to the Earth after the 13th. See yellow big arrow. This neaby the DOVE SIGN

DOVE

22-7-2008 CROP CIRCLE
