

OUR WAY TO RESURRECTION
Will be a BIG CROSS to hold on our shoulders

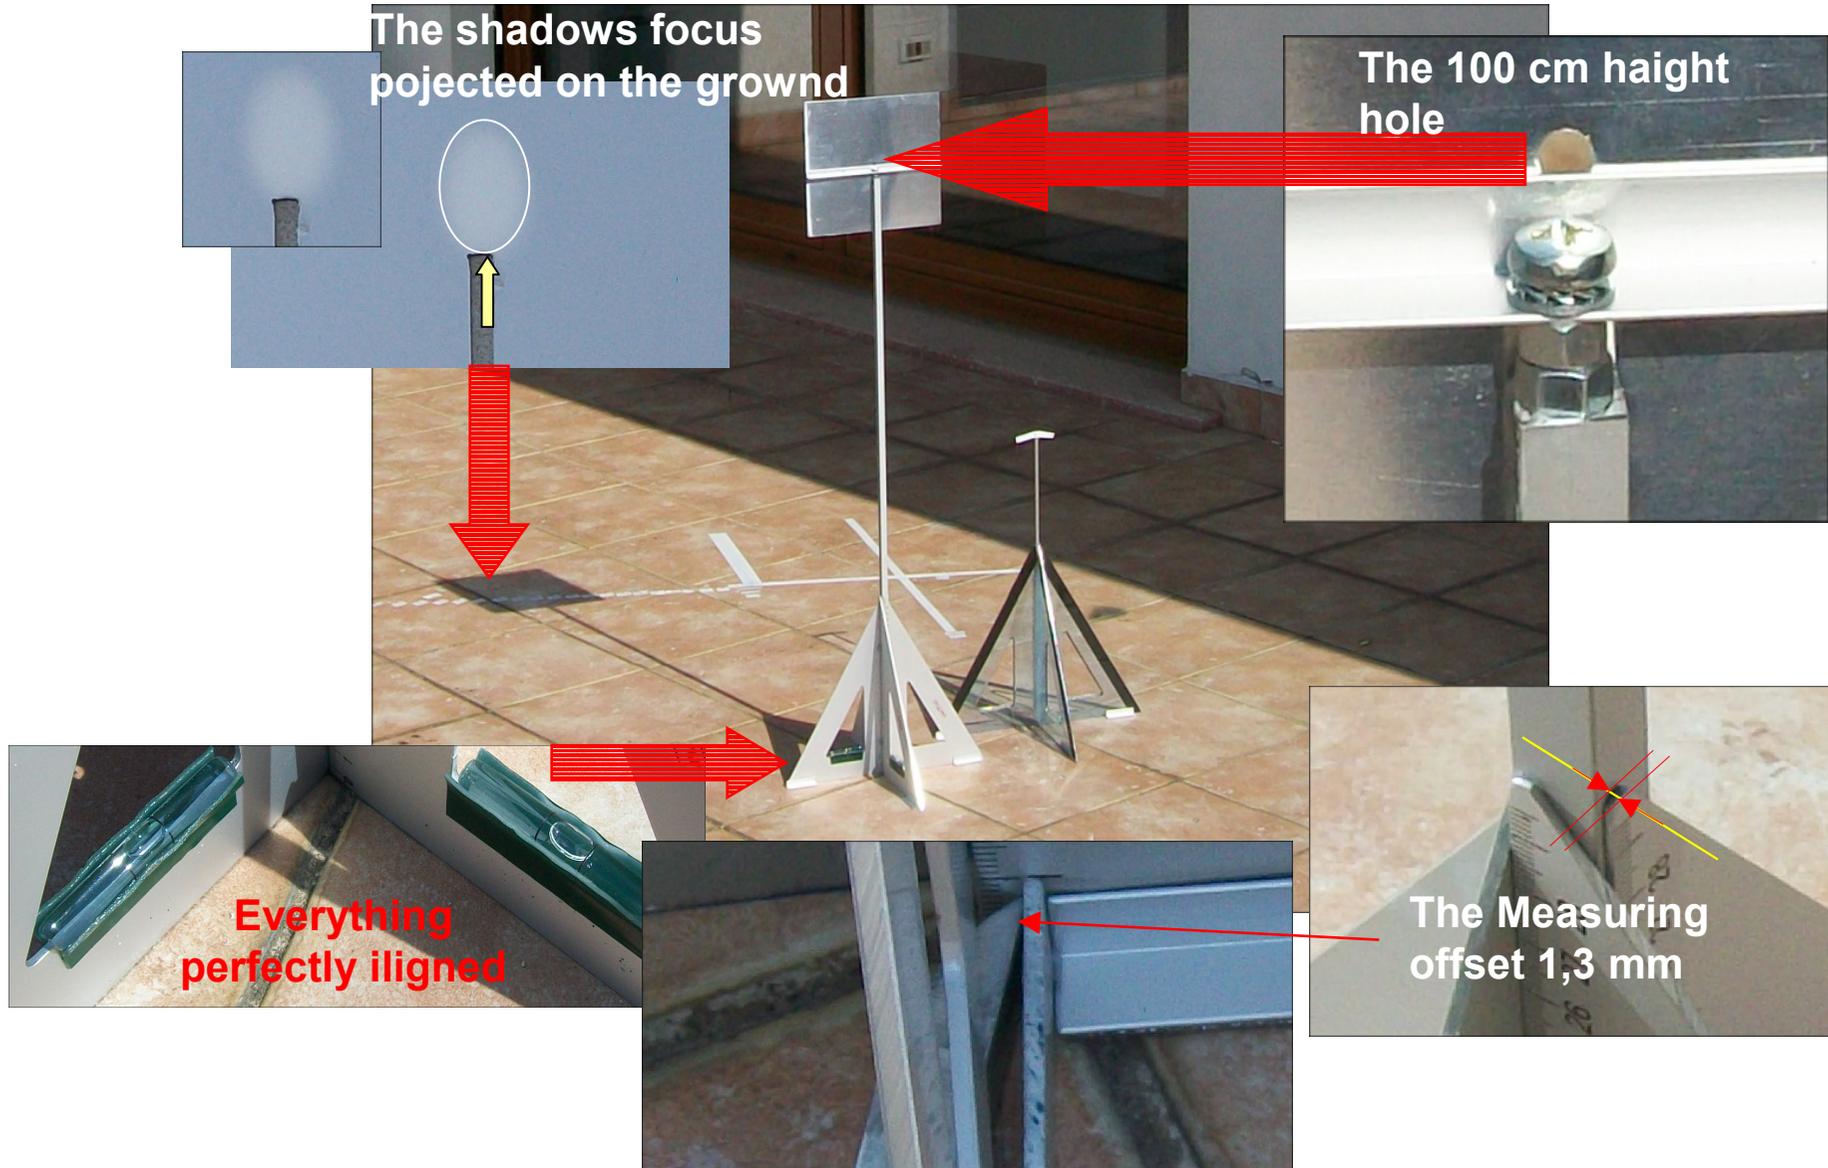

SOLAR SYSTEM SHIFTING
Earth ORBIT SHIFTING
From 13-7-2016 to 21-7-2017

We are already out of orbit with
Earth ORBIT PLANE OUT

The Equinox day importance

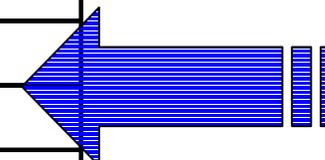

In the 2016 equinox day using a sophisticated home made gnomon we have measures the shadows and find that they are ALL OUT in respect to scientific calculations.

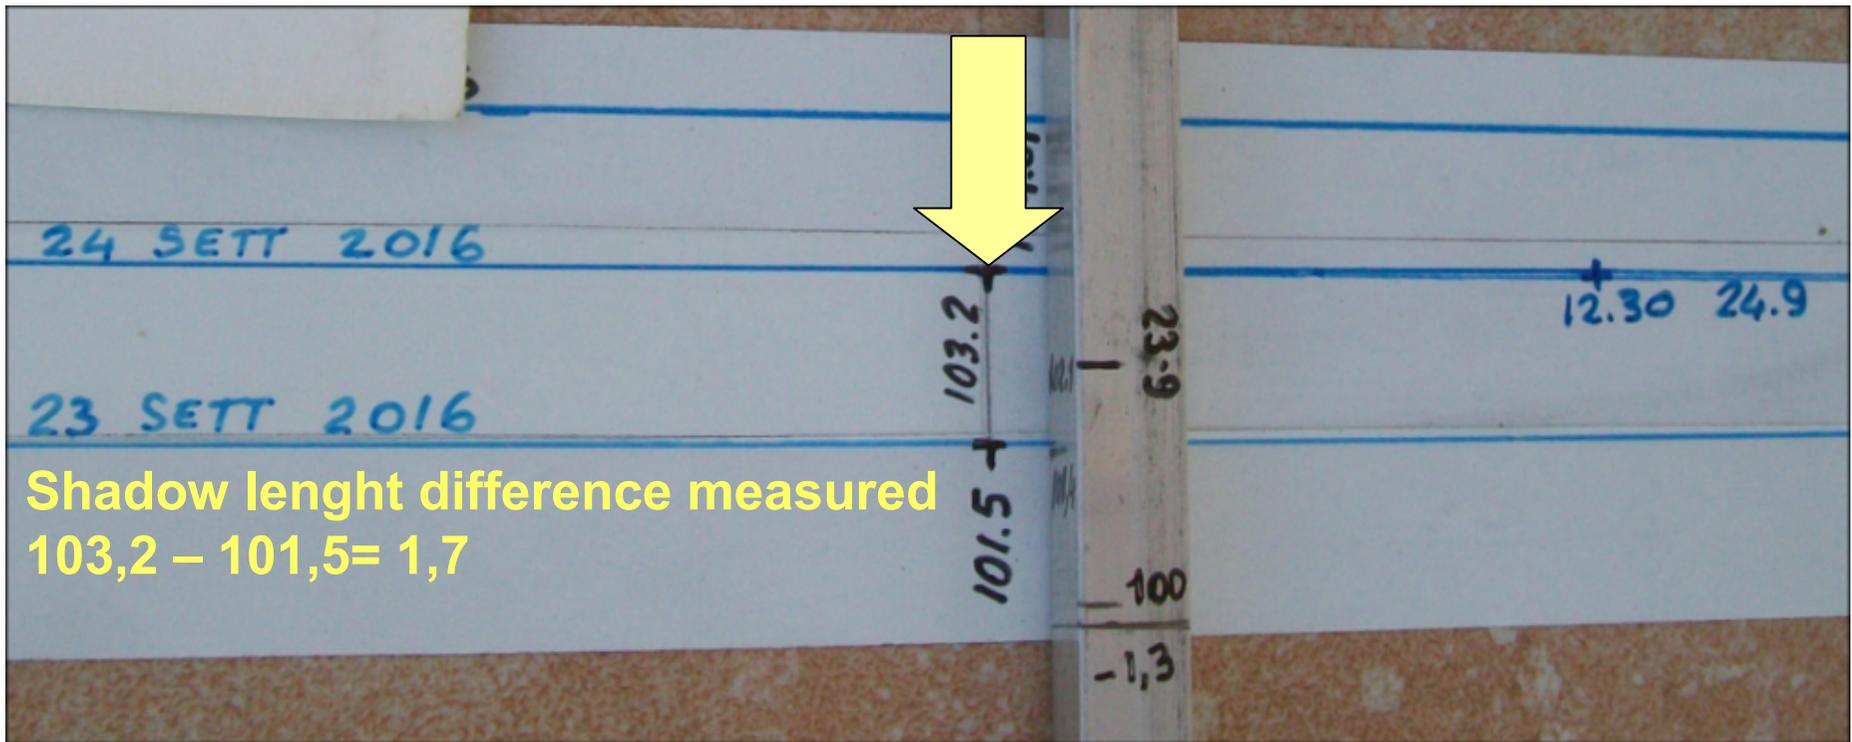

BIG PROBLEM – WE ARE ALREADY OUT OF ORBIT

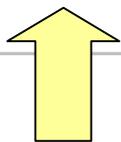

Shadow length difference calculated between two sequential days: 9 mm

LATITUDE 45,5849028	TANGENT from the orbital ellipse	shadow from the Elliptic orbit	shadow length difference from day before
		cm	mm
	0,958334	95,83338617	
	0,966506	96,65064371	8,17
	0,974746	97,47463145	8,24
	0,983055	98,30546289	8,31
	0,991433	99,14325395	8,38
	0,999881	99,98812299	8,45
	1,008402	100,8401909	8,52
	1,016996	101,6995811	8,59
	1,025664	102,5664198	8,67
22/09/2016	1,034408	103,4408358	8,74
23/09/2016	1,043230	104,3229609	8,82
24/09/2016	1,052129	105,2129296	8,90
	1,061109	106,1108794	8,98

shadow difference between 23-9 / 24-9 at the yellow arrow point	cm/ 24 hours	equinoxe shadow length (cm)	missing hours to the equinoxe point	date and time of the equinoxe
cm	1 hour	102,06 cm		
103,2 - 101,5	1,7 / 24	102,06-101,5	0,56 x 0,0708	23/09/2016
1,70	0,0708	0,5600	7,9059	
			7:54:35	20:15:13

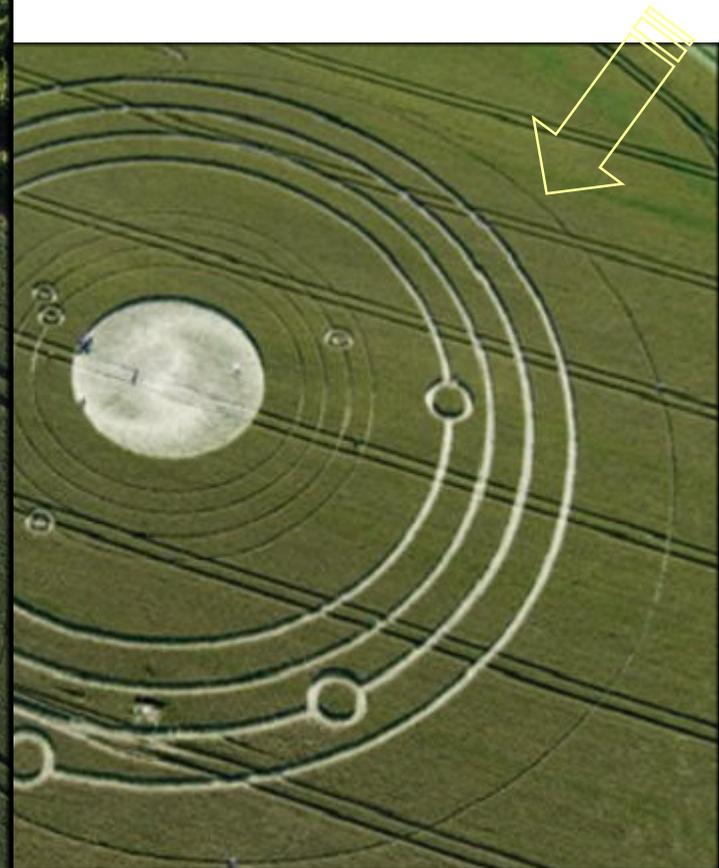

**On standard orbit this is not possible
 We are OUT of ORBIT!!!**

THE SOLAR SYSTEM SHIFTING

PLEASE LOOK AT THE DATE OF THE CROP

21-6-2015!!!! The SUMMER SOLSTICE and the thinner orbit like the “PLUTO SIGN” already used by angels to indicate the SOLAR SYSTEM on 15 July 2008 CROP

This CROP does not refer to the complete SOLAR system (angels knows how to draw it), but only to a particular orbit: the EARTH ORBIT. The “Pluto signs” gives a reference

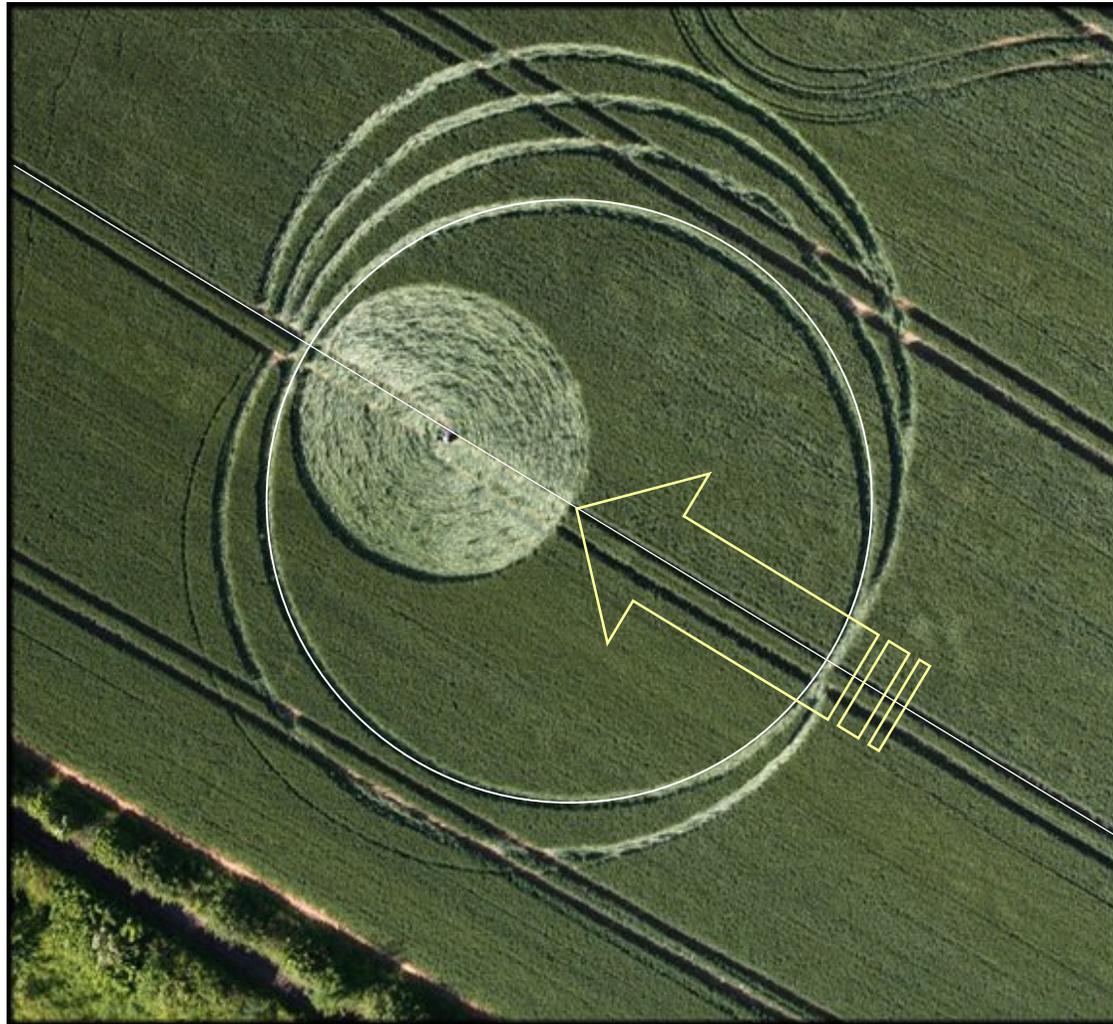

THE EARTH ORBIT SHIFTING

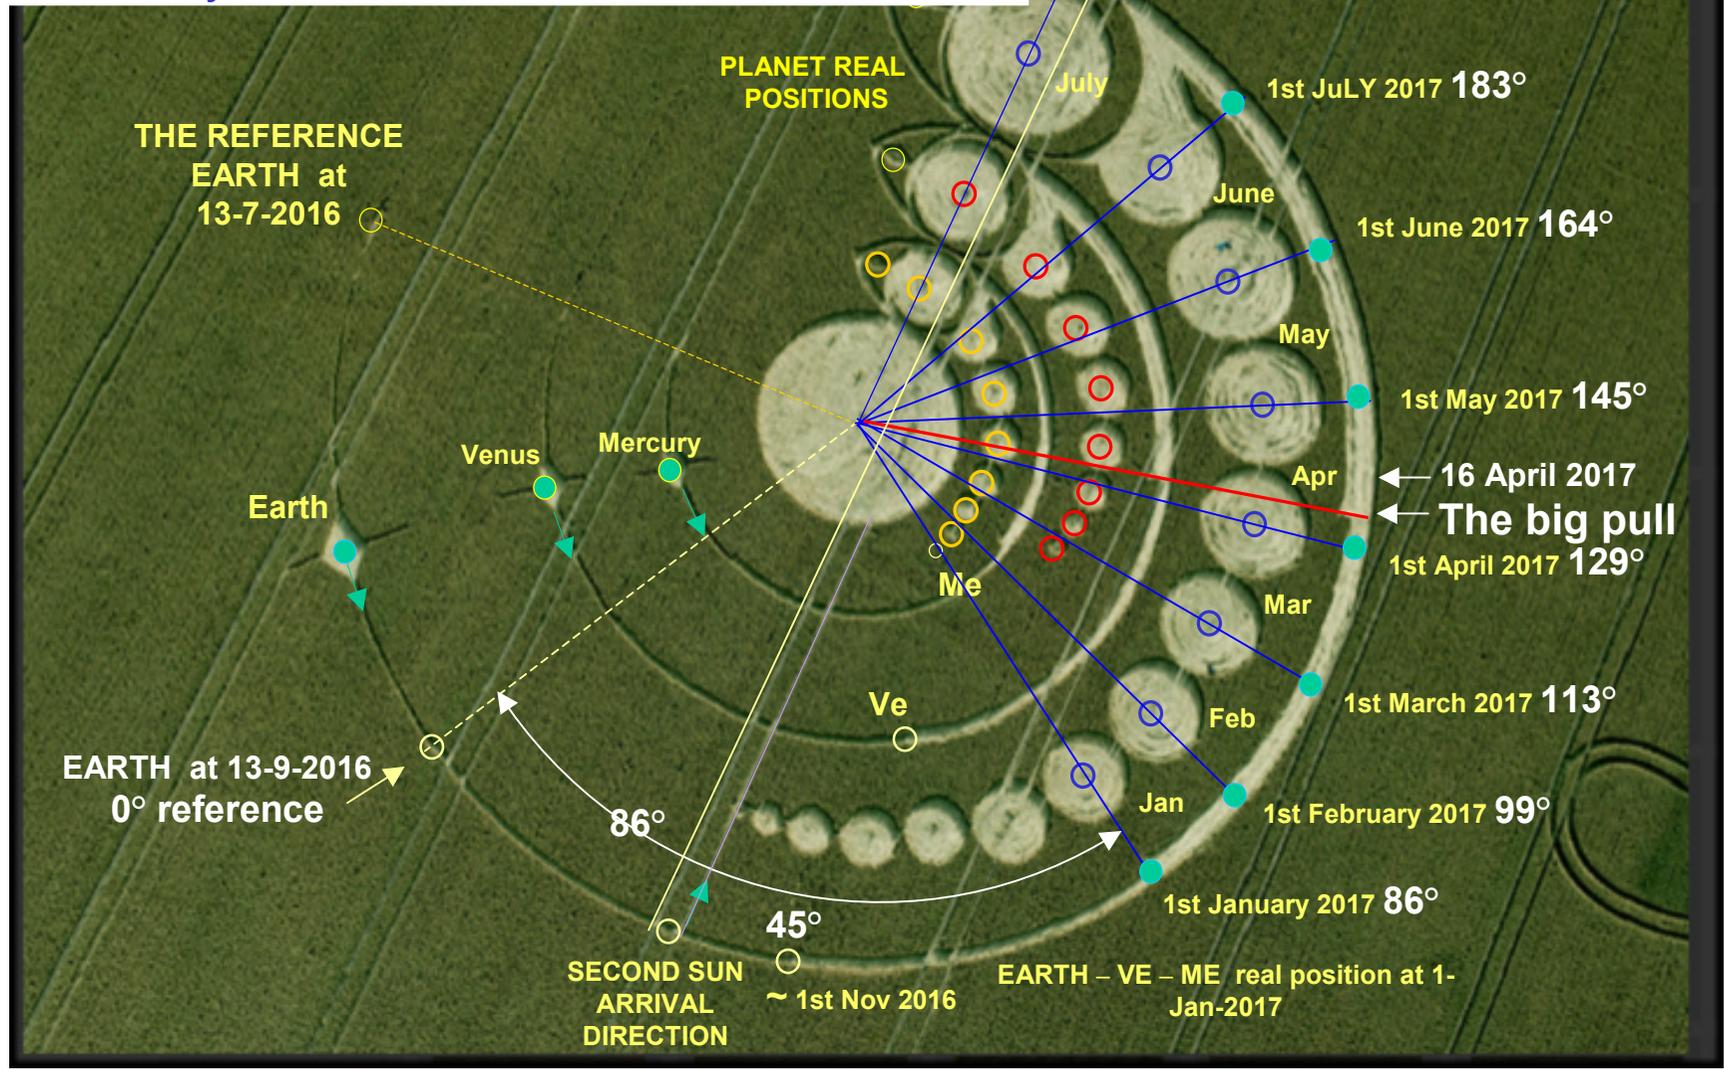

The internal circle is the normal Earth orbit

The RAIL passing into the center of that particular White circle gives the SECOND SUN COMING DIRECTION. We have proofs of in another CROP already decoded

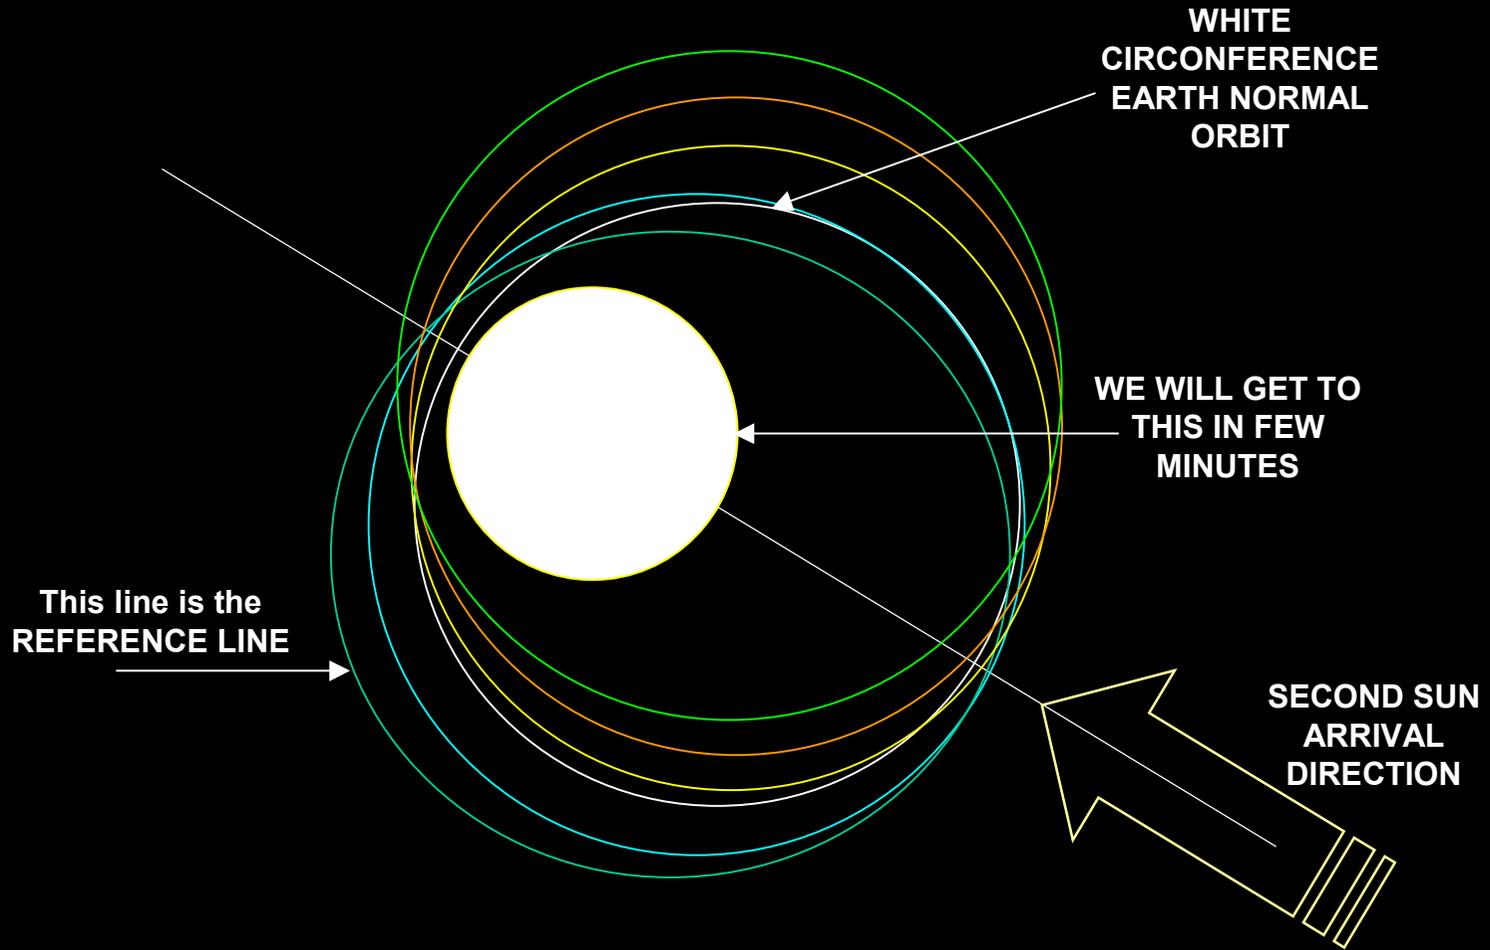

By shifting of few degrees the **SECOND SUN ARRIVAL** positioning on the RAIL, we get parallel to 21st July 2017 Earth position. We can suppose this is the real direction since 21st June 2015 – Second Sun real orbit is elliptic. This crop gives the positioning of the Earth on the year 2017

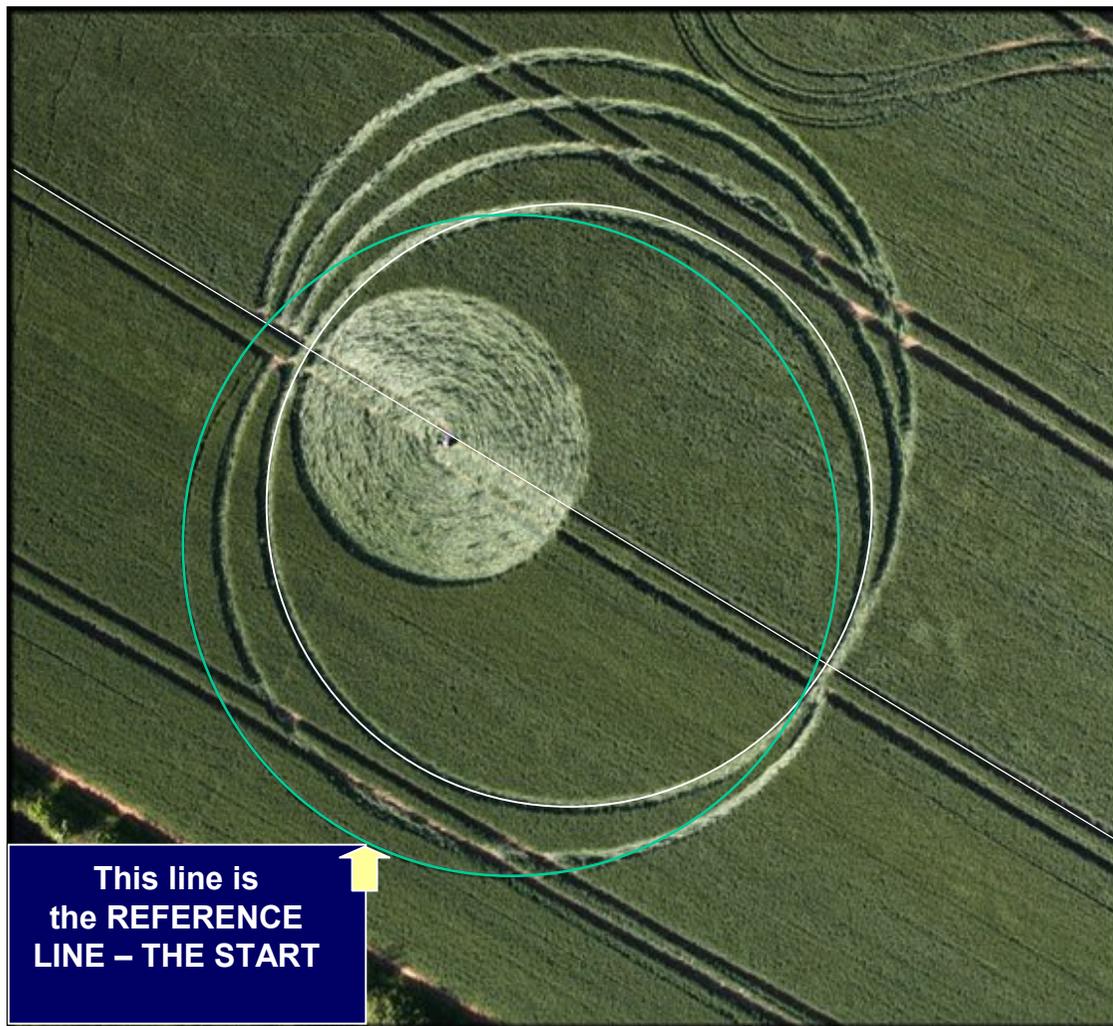

2017
PLANET ALIGNMENT

This is the full diagram of the 21-6-2015 CROP CIRCLE

THE EARTH ORBIT SHIFTING MOVEMENTS

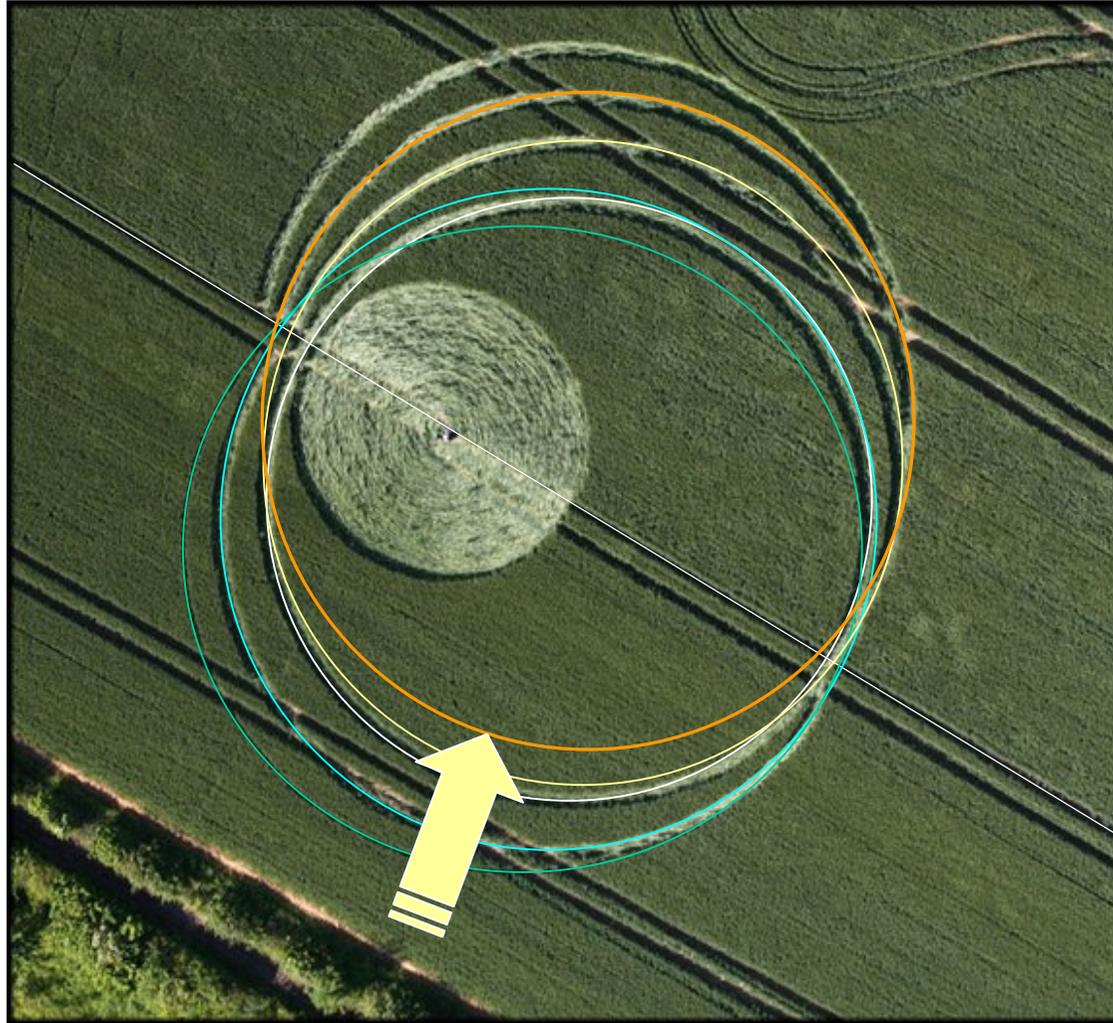

THE EARTH ORBIT SHIFTING MOVEMENTS

THE EARTH ORBIT SHIFTING MOVEMENTS

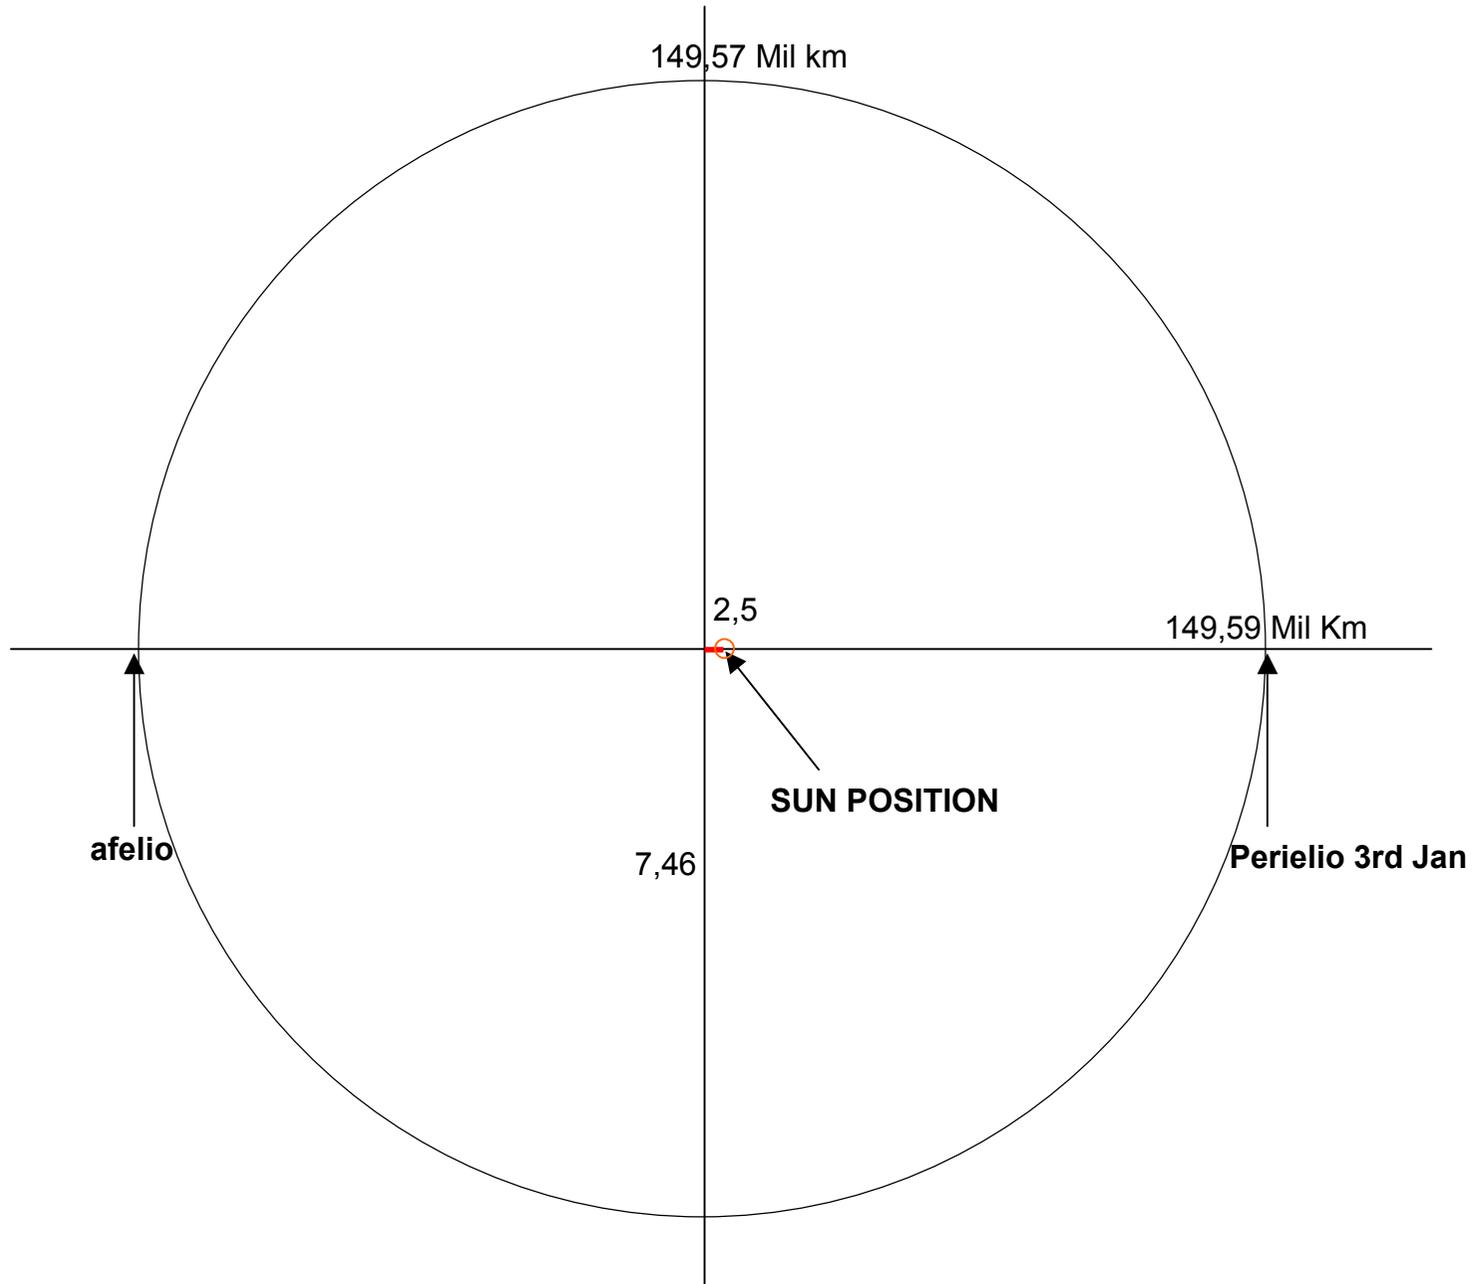

THE EARTH ORBIT SHIFTING MOVEMENTS

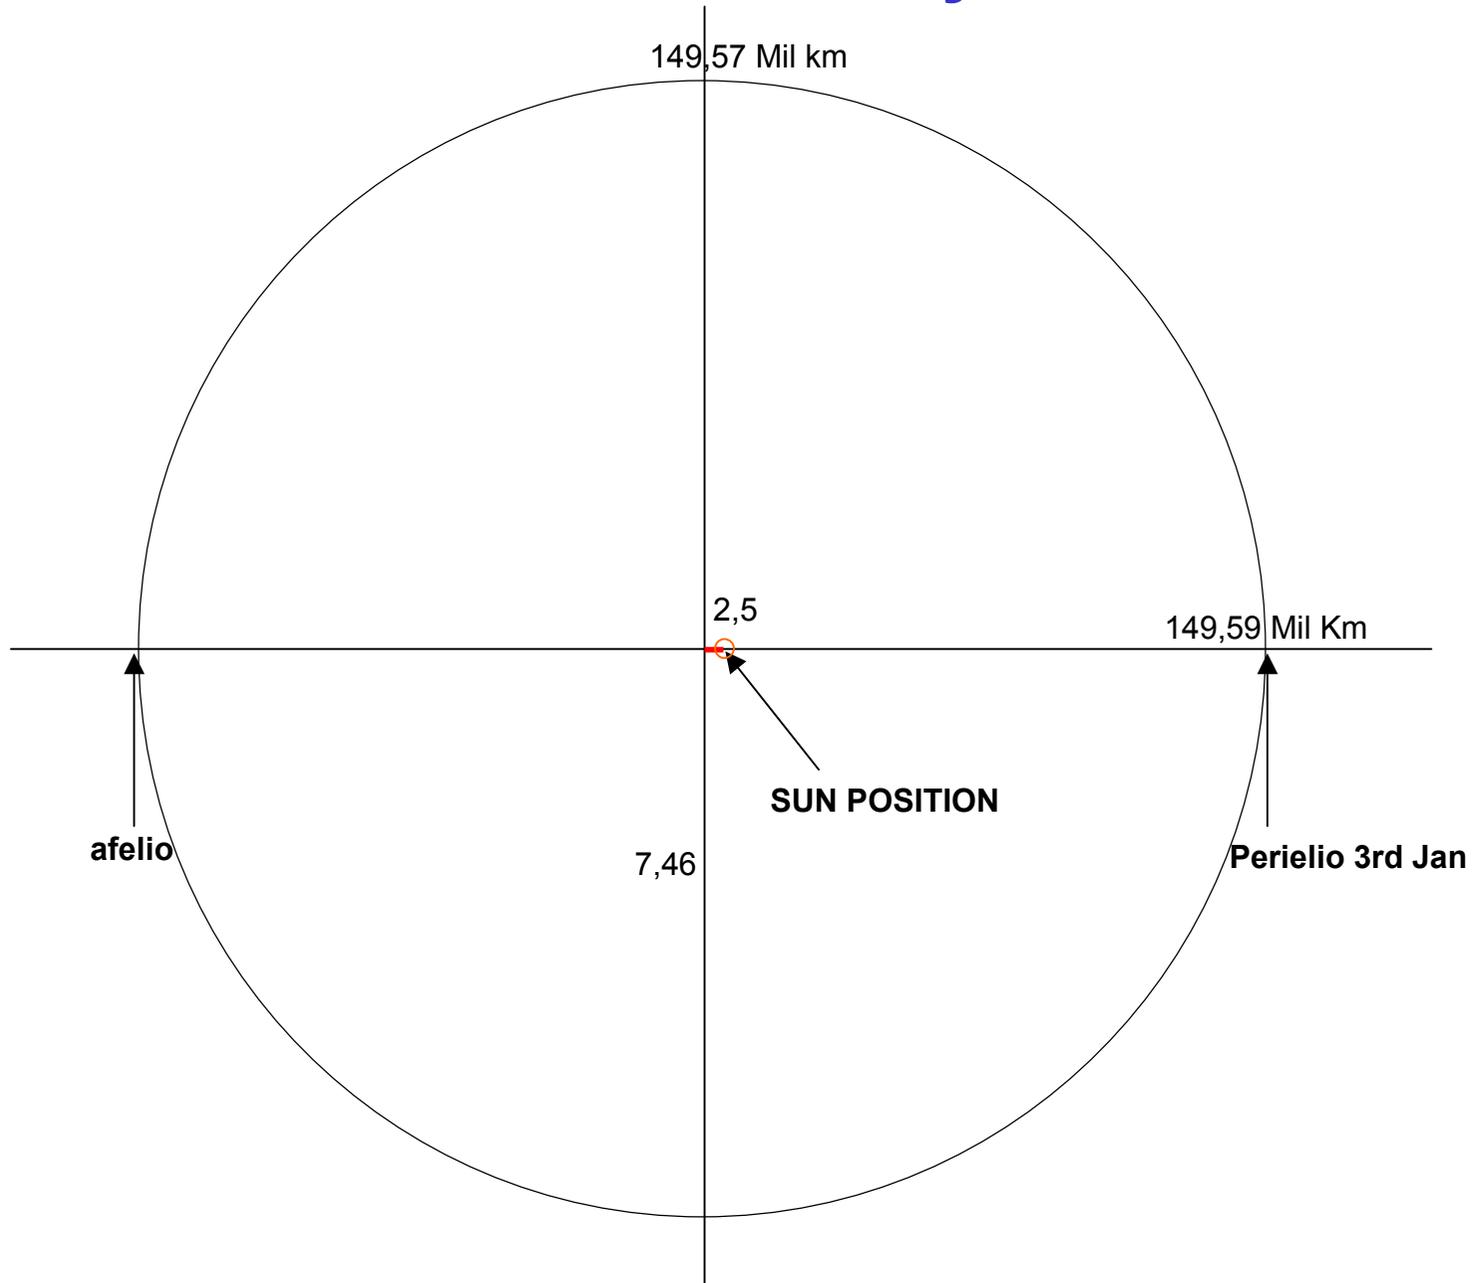

THE EARTH ORBIT SHIFTING MOVEMENTS

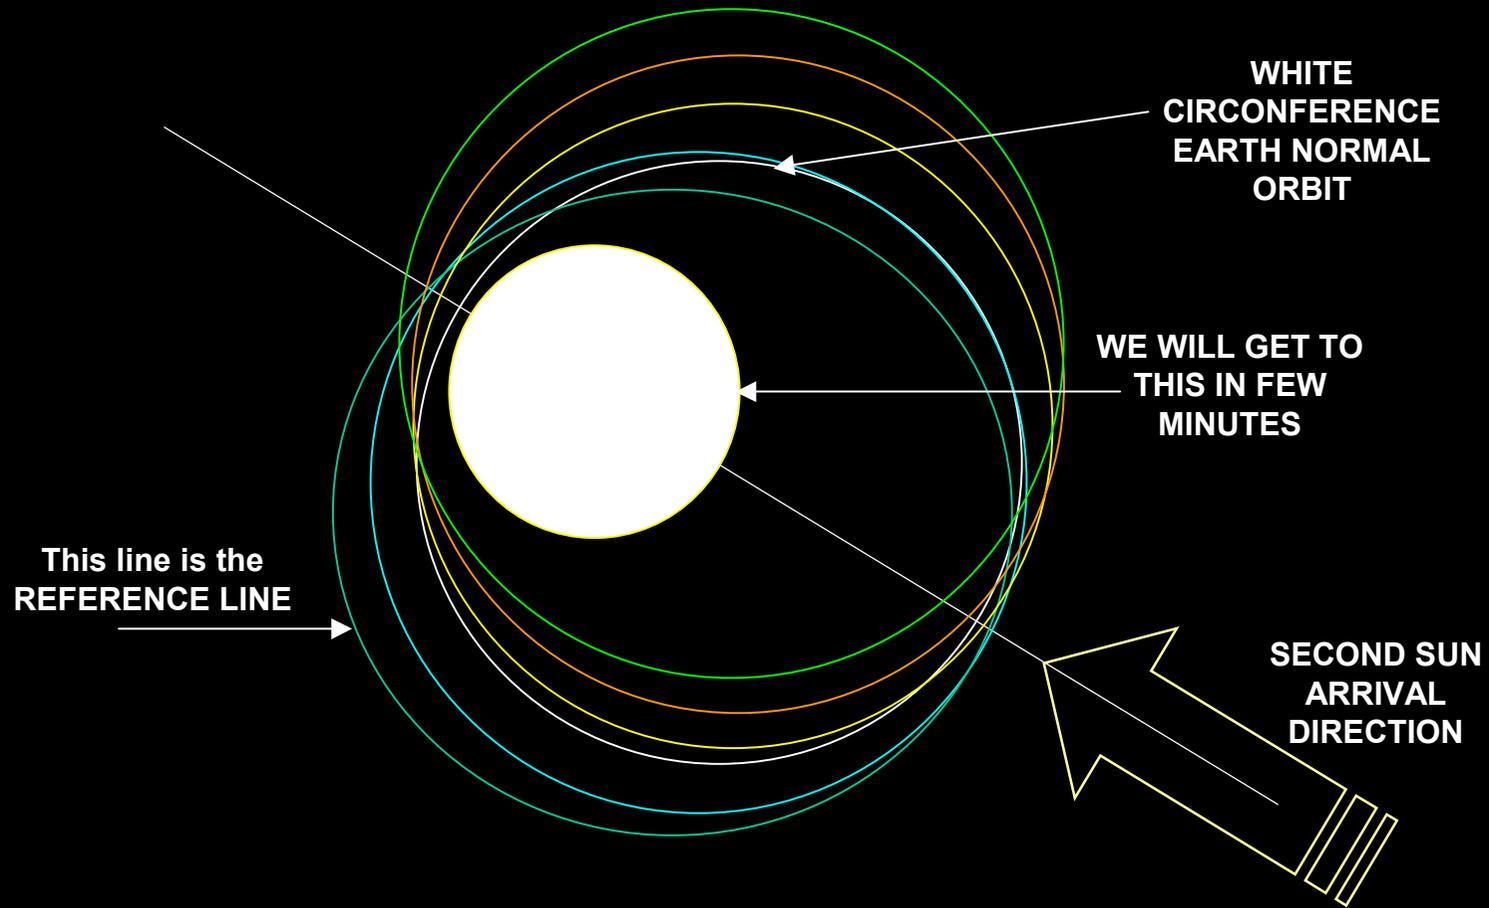

Here the NORMAL EARTH ORBIT in scale

We need to overlay this

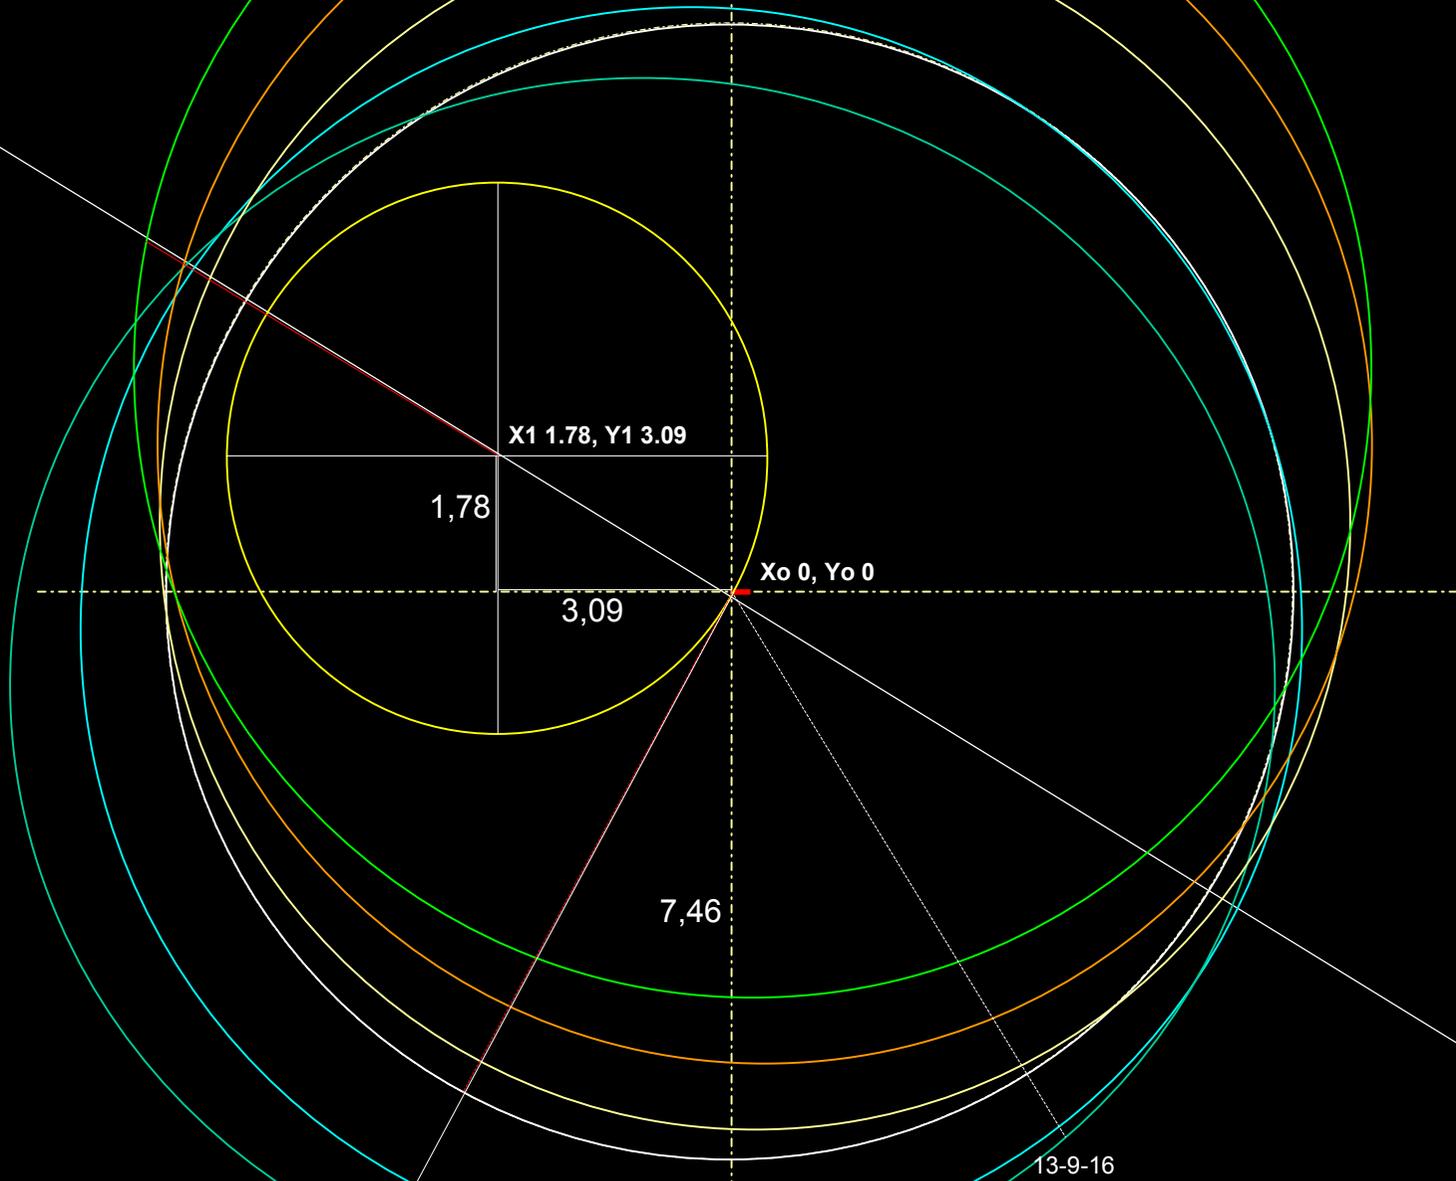

To THIS
making the two Earth WHITE orbits meet and overlay together
We need to scale this without losing proportions

A MATHEMATICAL MODEL COMES OUT:

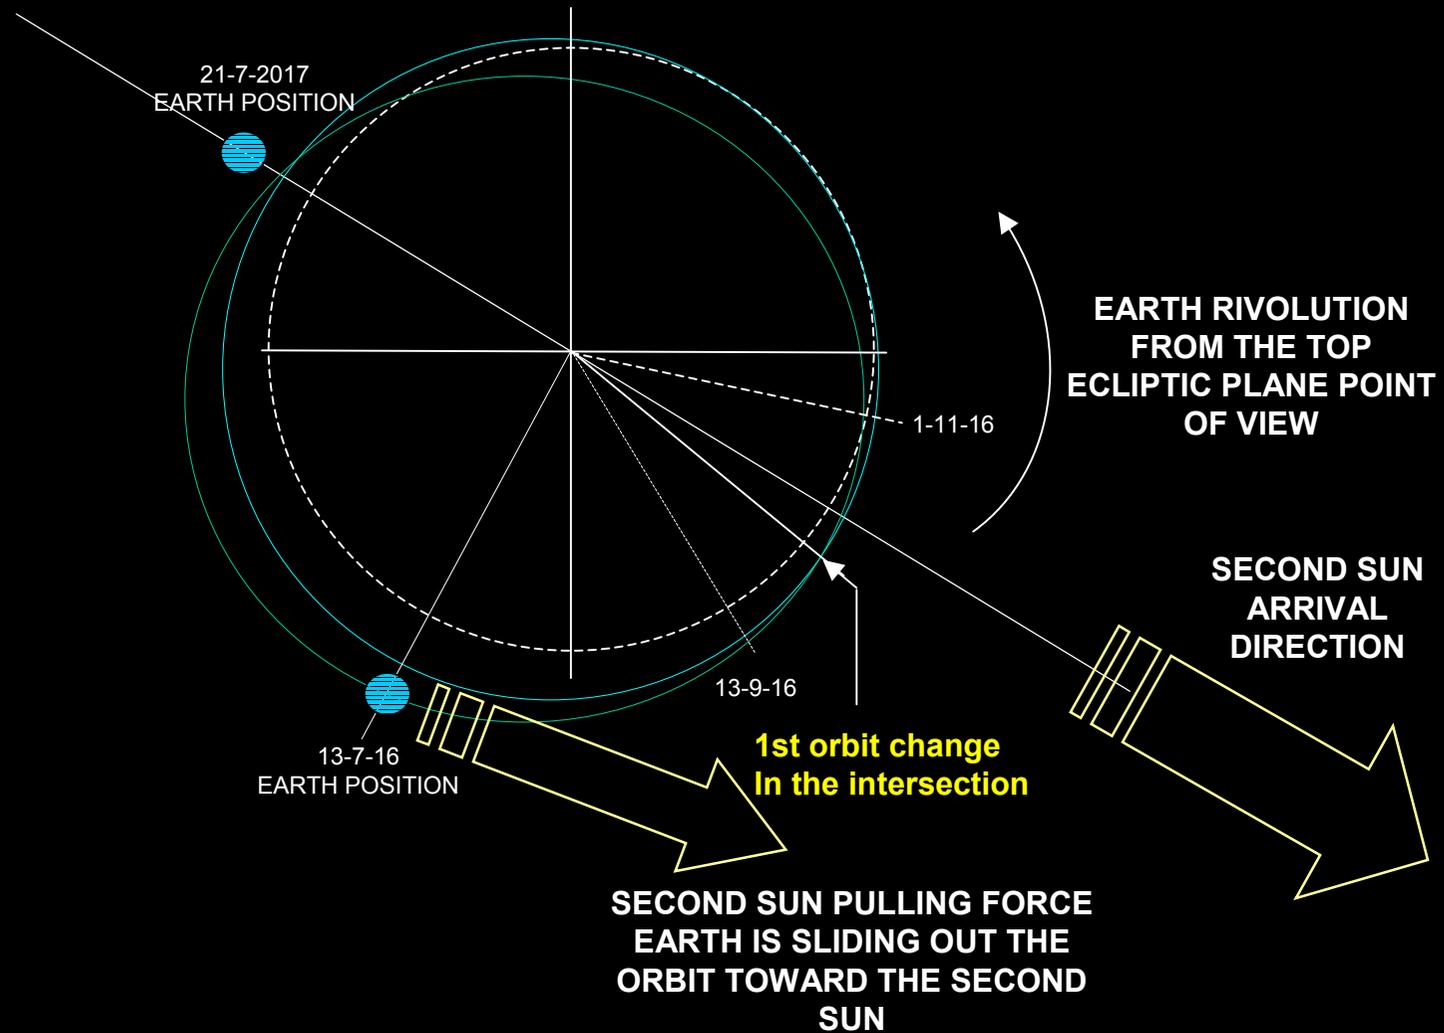

The internal YELLOW circle gives a math model to find the orbit position distances. The circles have been enlarged in proportion. The axis dimensions of the internal white circumference is proportioned to the REAL EARTH orbit. The small RED LINE at the center is the SUN FOCUS (2,5 million Km from $X_0 0, Y_0 0$) - All the positioning is SET on the PARALLEL LINE (of the TRAIL) that meets the 21-7-2017 EARTH POSITION (to be checked later on) given by the 1st AUGUST 2012 CROP.

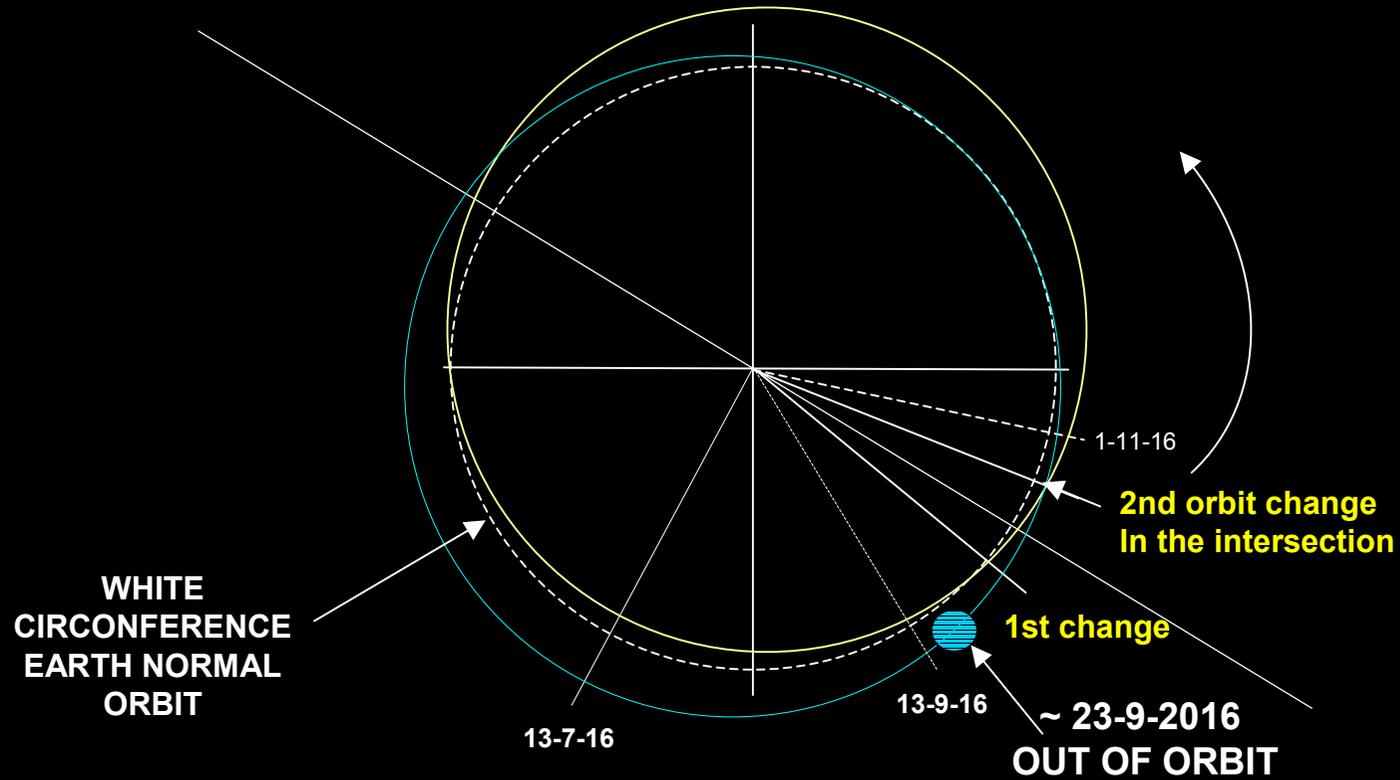

THE MATHEMATICAL MODEL:

OUR SUN in the CENTER STILL has the attractive force to win the SECOND SUN PULLING FORCE, but the EARTH ORBIT is pulled out due to the Earth position. NOTE. What we can understand is that the two CROPS has to be interconnected to get the FINAL RESULTS:

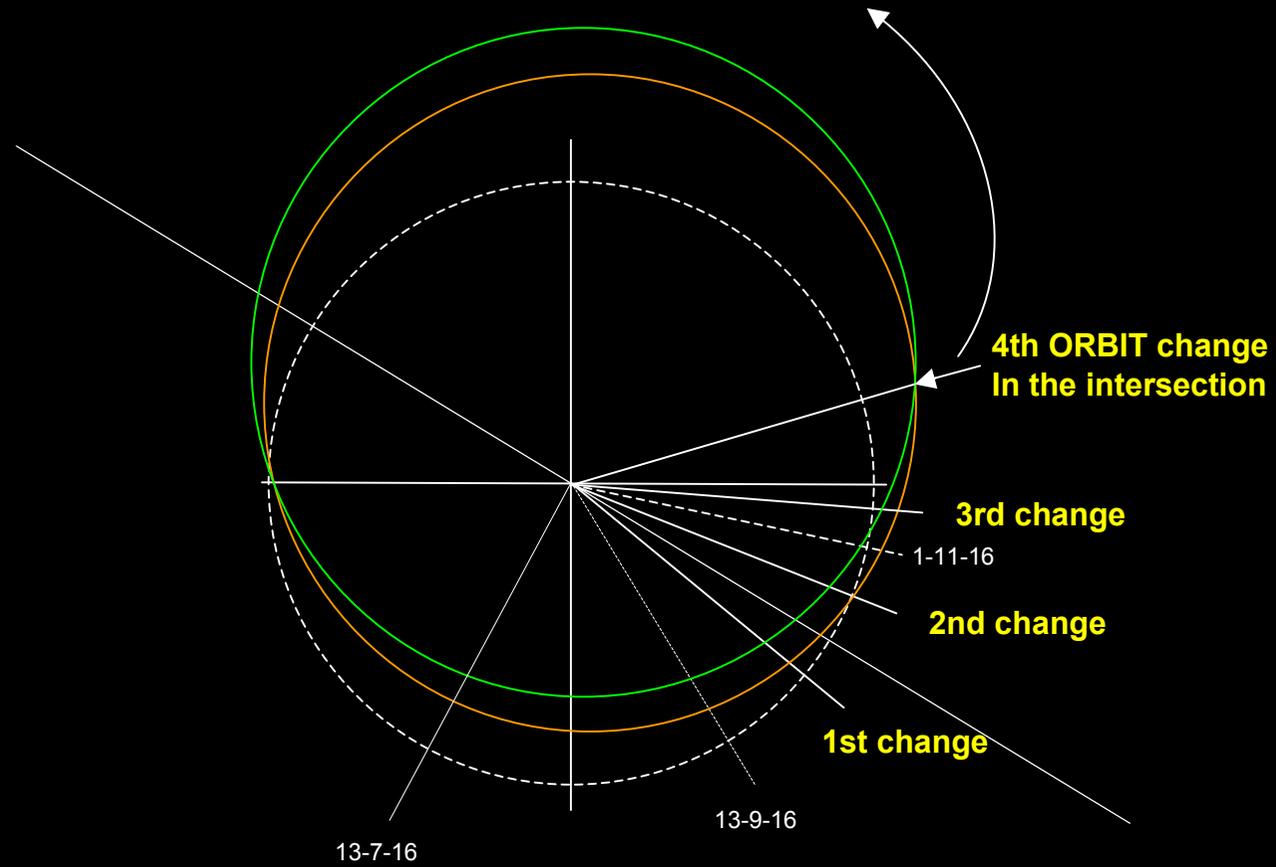

POSITIONING + DISTANCES

THE 23-SEPTEMBER 2016 EARTH OUT OF ORBIT WE ARE OUT of ORBIT since TIME BACK

The piece of the GREEN ORBIT above is the LAST EARTH ORBIT will follow

Degrees shown are backward from 21st JULY 2017 (+207°) position less the degrees to 13-9-2016 (164°) → 43°
 Found on 1st August 2012 CROP AND REFERRED to Xo 0, yo 0

THE EARTH ORBIT SHIFTING MOVEMENTS

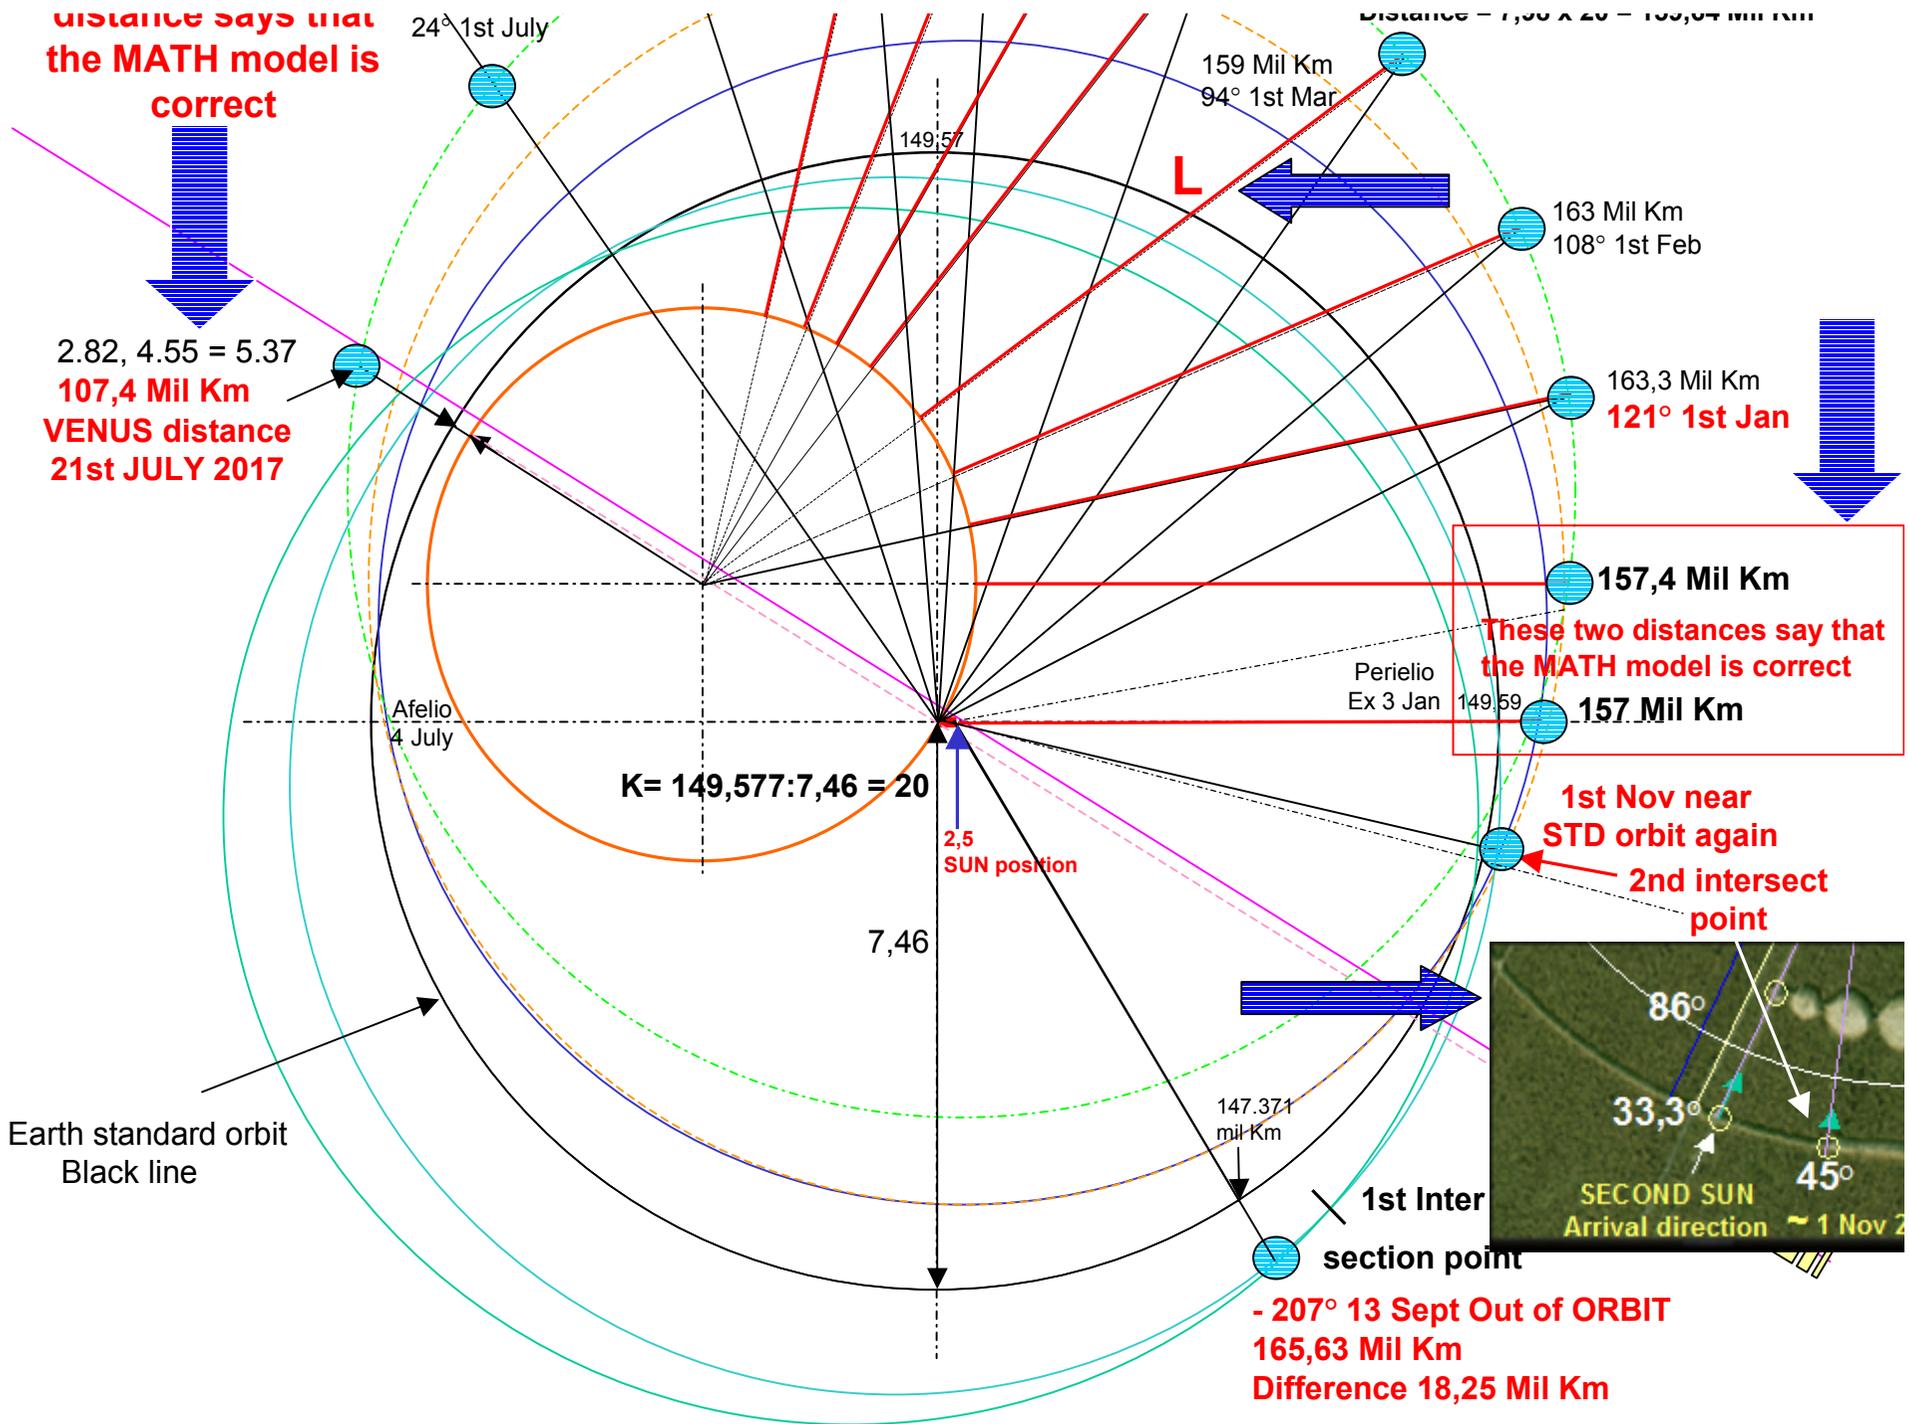

HOW TO FIND THE INSTANT DISTANCES FROM THE SUN:

THE MATH MODEL FOUND SEEMS TO BE COMPLYING UNTILL THE 13th MAY 2017 WHEN, WE ALL KNOW, THE EARTH WILL BE ON THE VENUS ORBIT. AND THAT'S IS WHAT WE NEED TO KNOW, BECAUSE AFTER THAT DATES ARE NO MORE VALUABLE (see the CALENDAR video) Starting from 13-5-2017 to 21st JULY 2017

ONLY THE VERY LAST POSITION WILL BE CORRECT: VENUS distance

THE MODEL USES THE SUN CENTER X_0, Y_0 FOR THE PART BELOW OF THE STANDARD EARTH ORBIT UP TO 0° (HORIZONTAL LINE) , WHILE IT USES THE SMALLER YELLOW UPSIDE LEFT CIRCLE TO CALCULATE THE DISTANCES ABOVE THE (X_1, Y_1). Let us see

Various notes:

1 – the shadow length difference from one day to the next at the EQUINOX DAY is COMPLETELY OUT (real measure toward very precise math calculation)

2 – Using the interconnection of the two CROPS we verify the followings:

2.1 – by adjusting few degrees the actual S.S. direction we can overlay the two crops and get same results. The results are integrated. One crop supplies the positioning, the second the distances.

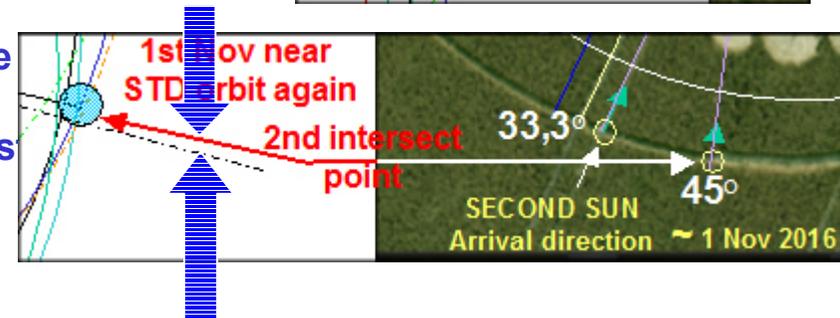

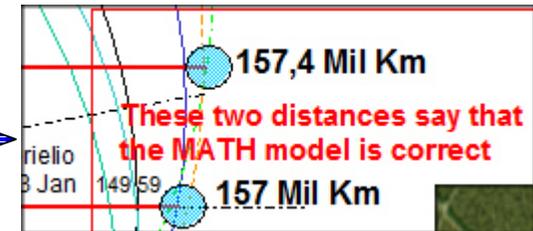

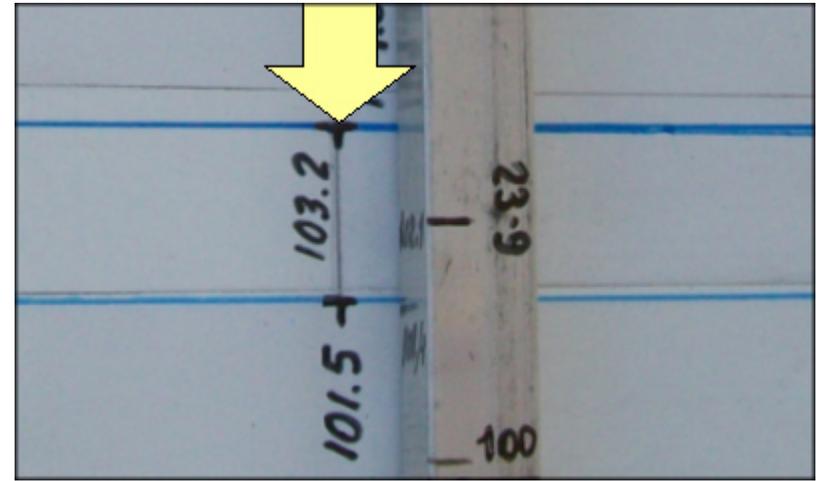

3 – several points demonstrate that the MATH MODEL found is CORRECT:

3.1 – the VENUS distance in the 21st July 2017

3.2 – the two distances found nearby, but correctly placed calculated by swapping from the BELOW MODEL to the ABOVE MODEL

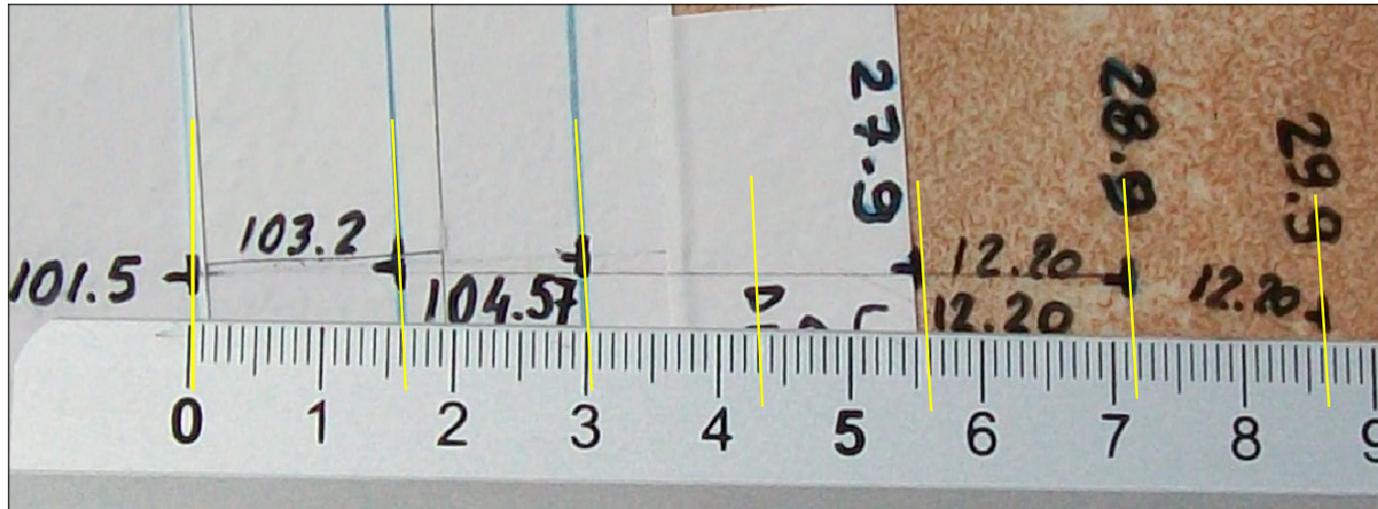

4 – the SECOND INTERSECTION POINT found (where we presumed to be a change of orbital speed) match the one signed on the 1st August 2012 CROP at the 1st November 2016. 1° difference maybe

DID YOU IMAGINE ANYTHING OF THIS?

we have a big problem here:

WHY the VARIATION of the SHADOW LENGHT is higher than it should? In the equinox days the variation should be of about (8,82 mm) increasing slowly day by day while here we have variations of 16-14-12 ...16,5 mm !!! The first strange thing is that there are variations NOT CONSTANT (planets? Earthquakes? Moonpassing? Tides..Else? This does not matter much). We may be wrong in getting a shadow lenght of 0,5 or 1 mm at least, but 3 or 4 it is difficult. So let's FOCUS on the HIGHER SHADOW VARIATION of a MEDIA of 14,33 mm.

	TANGENT from the orbital ellipse	shadow from the Elliptic orbit	difference	SHADOW 12:20	variation
45,5849028					
1,020628		cm	mm	cm	mm
23/09/2016	1,043230	104,32	8,82	101,50	
24/09/2016	1,052129	105,21	8,90	103,10	16,00
25/09/2016	1,061109	106,11	8,98	104,50	14,00
26/09/2016	1,070170	107,02	9,06	105,70	12,00
27/09/2016	1,079313	107,93	9,14	107,00	13,00
28/09/2016	1,088540	108,85	9,23	108,65	16,50
29/09/2016	1,097854	109,79	9,31	110,10	14,50

When do we have a shadow variation day by day of 14,33 mm?

ellipse revolution	apparent earth axis declination (degrees) on the ellipse	45,5849028 1,020628	TANGENT from the orbital ellipse	shadow from the Elliptic orbit cm	difference mm
223,9418	56,4219	04/11/2016	1,506369	150,64	13,78
224,9452	56,6650	05/11/2016	1,520329	152,03	13,96
225,9486	56,9081	06/11/2016	1,534469	153,45	14,14
226,9519	57,1512	07/11/2016	1,548796	154,88	14,33
227,9553	57,3943	08/11/2016	1,563311	156,33	14,52
228,9587	57,6373	09/11/2016	1,578021	157,80	14,71
229,9620	57,8804	10/11/2016	1,592928	159,29	14,91
230,9654	58,1235		1,608039	160,80	15,11
231,9688	58,3666		1,623357	162,34	15,32

$$57,1512^{\circ} - 45,5849^{\circ} = 11,56^{\circ}$$

Maybe we can suggest a 12 /13 ° variation instead of 14,33

We still have something as $54,47^{\circ} - 45,58^{\circ} = 8,9^{\circ}$ to give for free to someone

215,9149	54,4772	27/10/2016	1,400767	140,08	12,49
----------	---------	------------	----------	--------	-------

**WHERE DO THEY COME FROM?
SEEMS TO BE ALREADY IN WINTER TIME
BUT IT'S NOT!**

HOW CAN WE GET A LONGHER SHADOW VARIATION day by day?

THE EARTH ORBIT INCLINATION ON THE ECLIPTIC PLANE IS ZERO

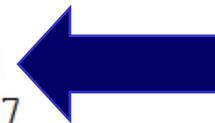

They say

From NASA

<http://nssdc.gsfc.nasa.gov/planetary/factsheet/earthfact.html>

Orbital parameters

Semimajor axis (10^6 km)	149.60
Sidereal orbit period (days)	365.256
Tropical orbit period (days)	365.242
Perihelion (10^6 km)	147.09
Aphelion (10^6 km)	152.10
Mean orbital velocity (km/s)	29.78
Max. orbital velocity (km/s)	30.29
Min. orbital velocity (km/s)	29.29
Orbit inclination (deg)	0.000
Orbit eccentricity	0.0167
Sidereal rotation period (hrs)	23.9345
Length of day (hrs)	24.0000
Obliquity to orbit (deg)	23.44
Inclination of equator (deg)	23.44

0° DEG = 0° 0' 0"

BUT COMES THE TIME WHERE

The HOLY VIRGIN MARY in ANGUERA says in message #2,509 - 13.04.2005

Dear children, the treasure that men seek in the depths of the earth and which has become cause for war and divisions, will cease to exist [*]. Humanity will pass through great trials and men will seek death to escape from suffering. **The ecliptic: because of this there will be great sorrow for humanity.** Kneel in prayer. I do not want to force you, but what I say must be taken seriously. Repent. God wants to save you. Repent. This is the message I give you today in the name of the Holy Trinity. Thanks for allowing me to reunite you here once again. I bless you in the name of the Father, the Son and the Holy Spirit. Amen. Be at peace.

[*] OIL, when the Earth will tilt all the OIL WELLS will be destroyed and Satellites fall down

Tenth of messages about Earth Axis TILTING, but here she talks about:

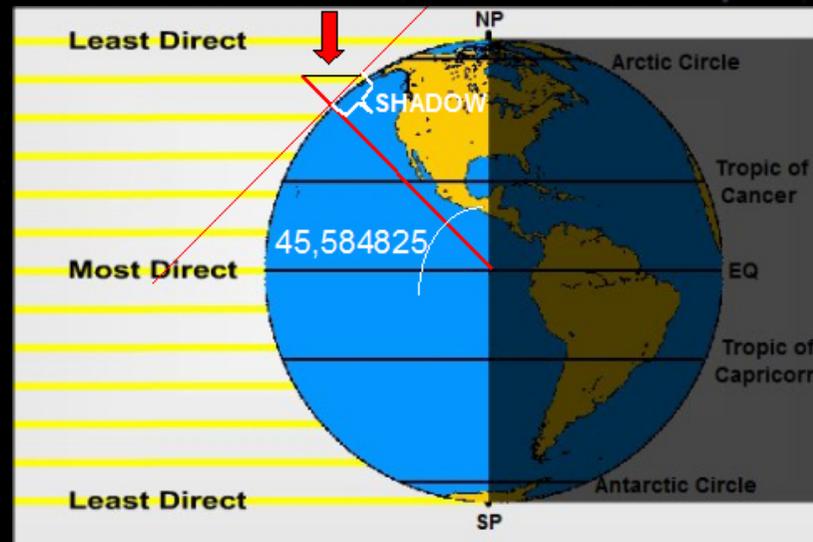

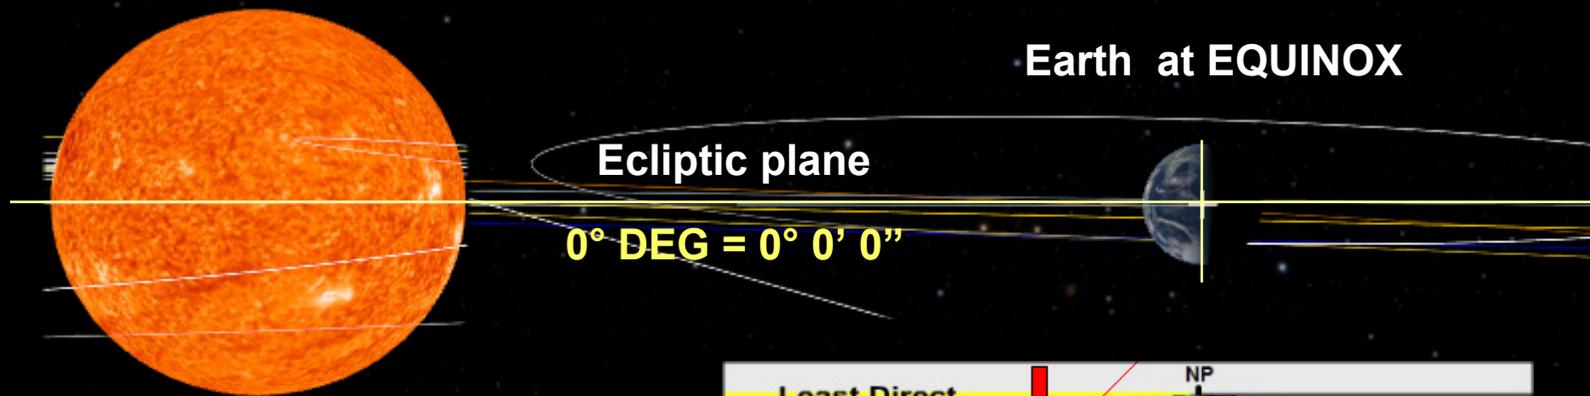

ECLIPTIC

DO YOU REMEMBER THE “PLUTO SIGN”?
HERE IS THE CLUE
ORBIT PLANE TILTING FROM ECLIPTIC PLANE AS PLUTO.
HOW MUCH WILL BE THE TILTING?

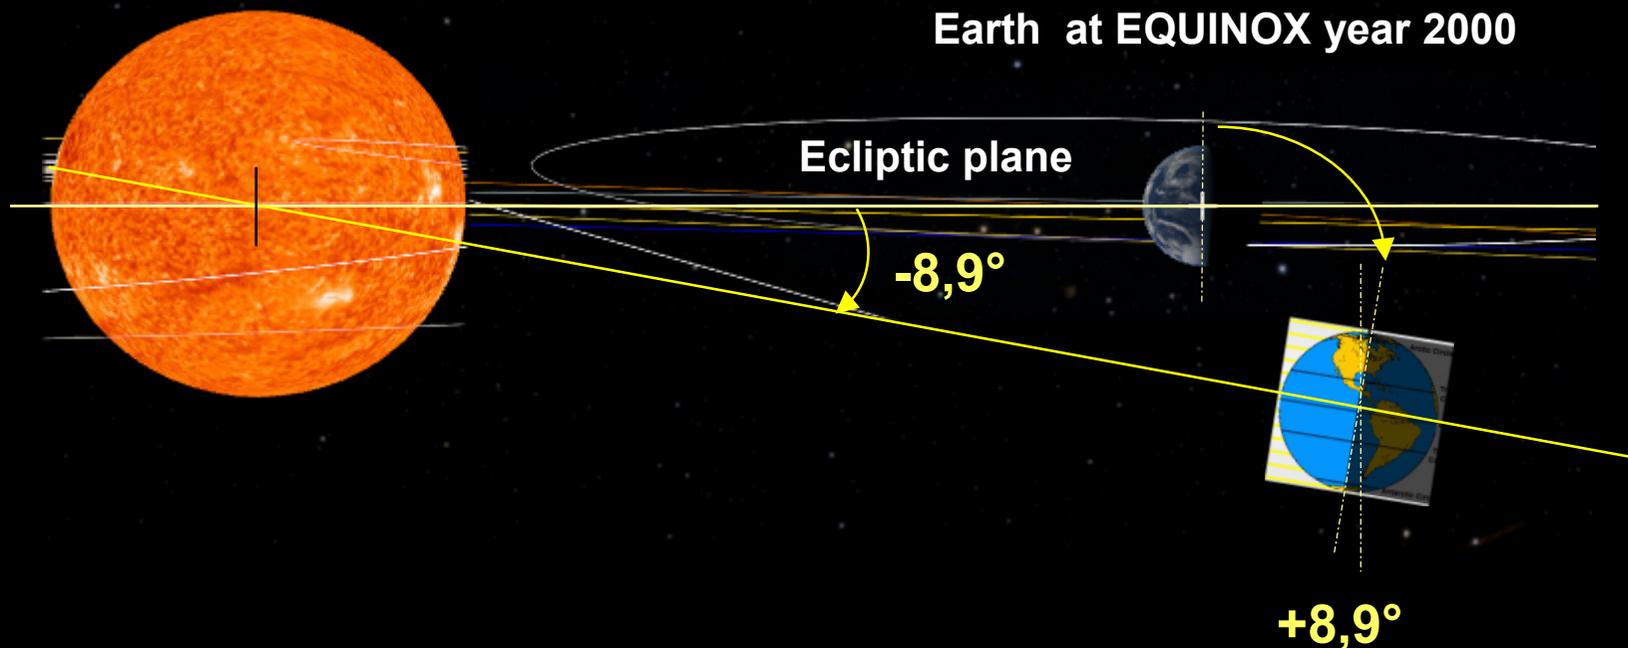

THE EARTH ORBIT INCLINATION ON THE ECLIPTIC PLANE IS ZERO

They say

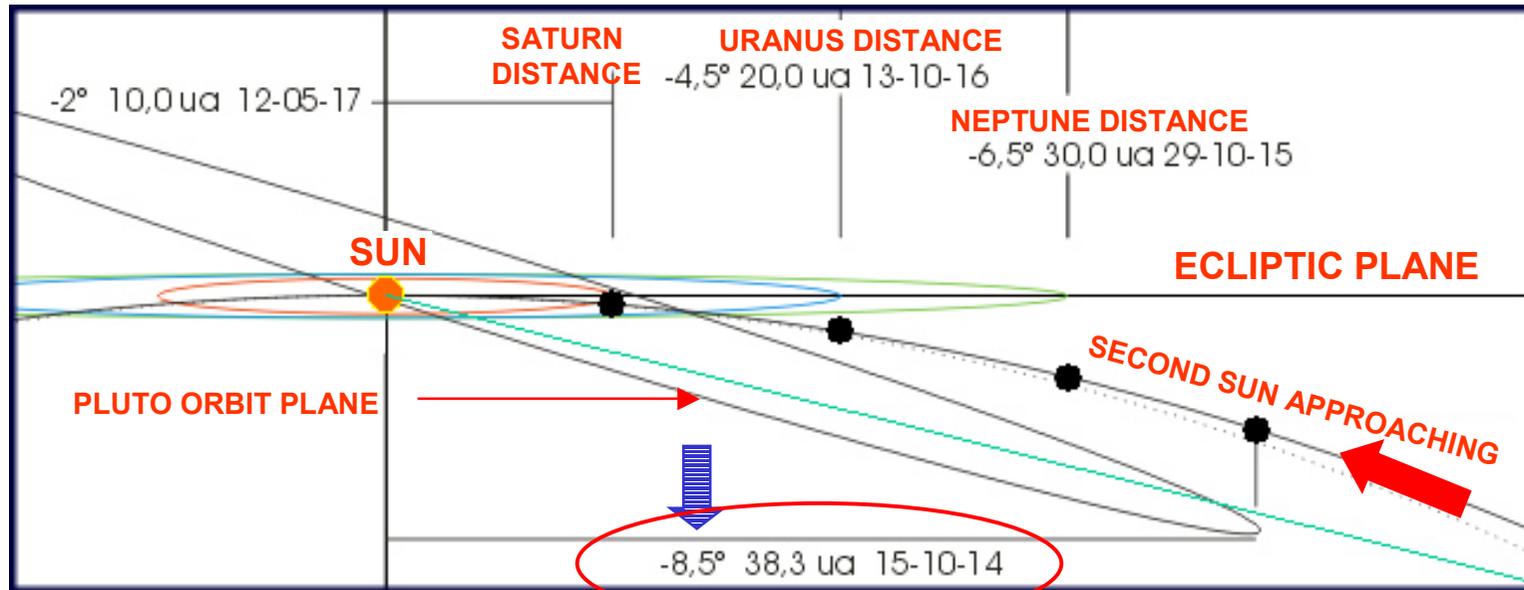

THE EARTH ORBIT INCLINATION ON THE ECLIPTIC PLANE **WAS ZERO**

We can say, and we can also add that all the planets have
TILT their orbit plane consequently. WHY?

Earth at "EQUINOX" year 2016
159 Mil Km and EARTH ORBIT PLANE TILTING – $8,9^\circ$
SHADOW VARIATION SHOULD GET LONGER
DIFFERENCE IN RECEIVING SUN RAYS ALSO

The Pulling has been started since a couple of years ago.
THE SECOND SUN COMES FROM THE BOTTOM of the ECLIPTIC. These calculations comes out from previuos Angels suggestions on CROPS

In 2014 its pulling was already enough to initiate the tilting of planet orbit planes
 An easy question arise: why astronomers do not notice this?

Do astronomers measure shadow lenght? NO

If they do at equinox has changed MUCH? NO, it seems only that the equi day has been delayed by 30 hours. Heaven is tricking scientists. Any of them would answer: well we know the day changes forth and back

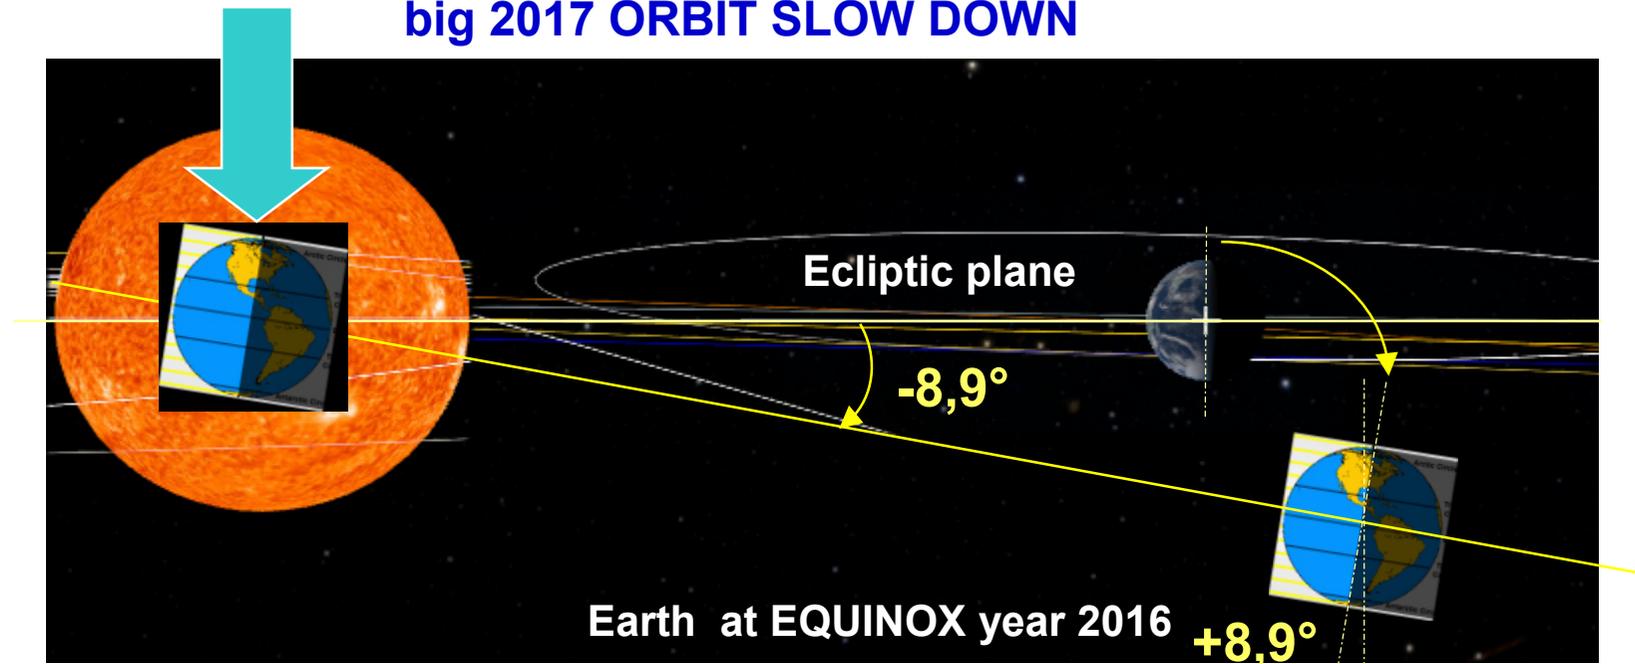

If all the PLANETS ORBITS tilt together, the reference is the CENTER of our SUN not the Earth. Now, does the center of the SUN be FIXED with a finger or with a ruler? NO, because the SUN SURFACE is always changing and scientist easily says that the SUN POLES shift 180° in 11 Years so....!!!! Does a variation of 8.9° in 2 years time being an issue for them?

NOT AT ALL

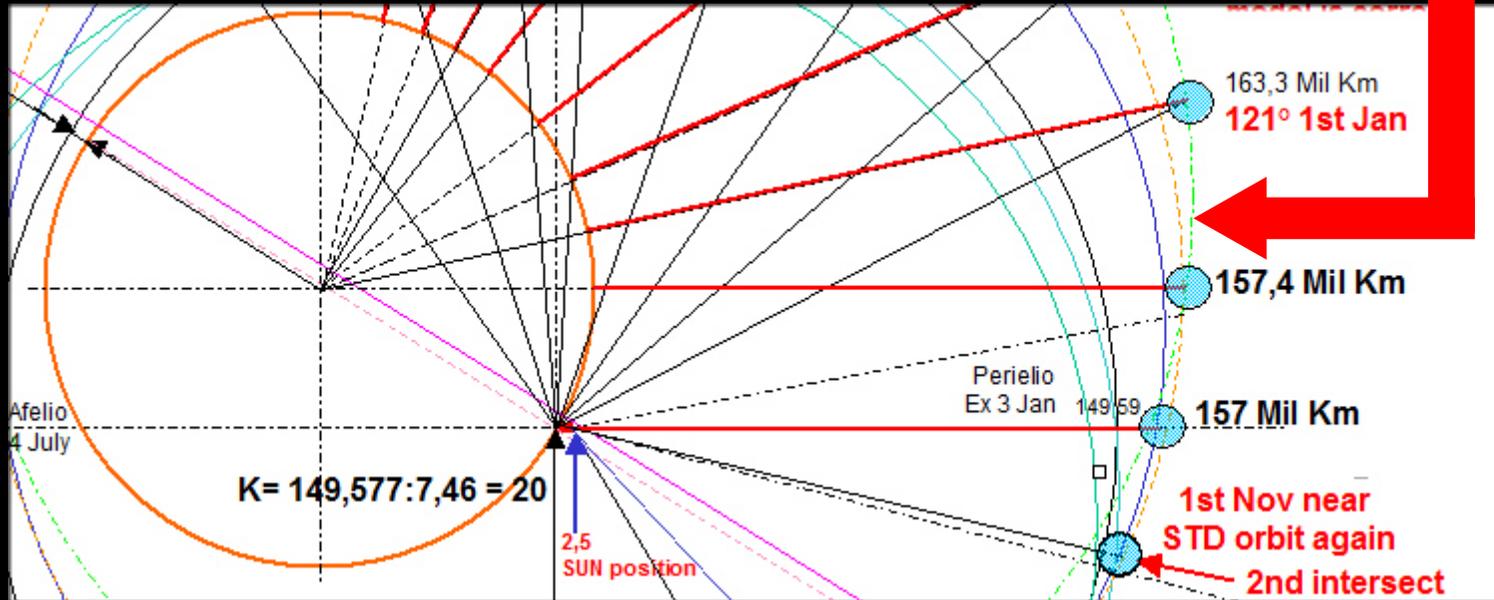

Heaven is FOOLING scientists?

On the Equinox day the **ABSOLUTE** value of the shadow length measured is roughly right (more or less into 30 hours difference). Only by looking continuously to the variation of the shadows we are able to note that the Orbit Plane is **TILTED**. Now we can wait for the Winter Solstice, where up to the theoretical 21st Dec the shadows should continuously become longer while after the **DEC** solstice going onwards to the **SUMMER** Solstice shadows should shorten. But here is the situation. In 3 months time, from 23rd Sep to 21st Dec means rotating $\frac{1}{4}$ orbit returning

Back **HERE** roughly on the 0° **ORBIT PLANE**, wouuuhhh, then the big 2017 **ORBIT SLOW DOWN**

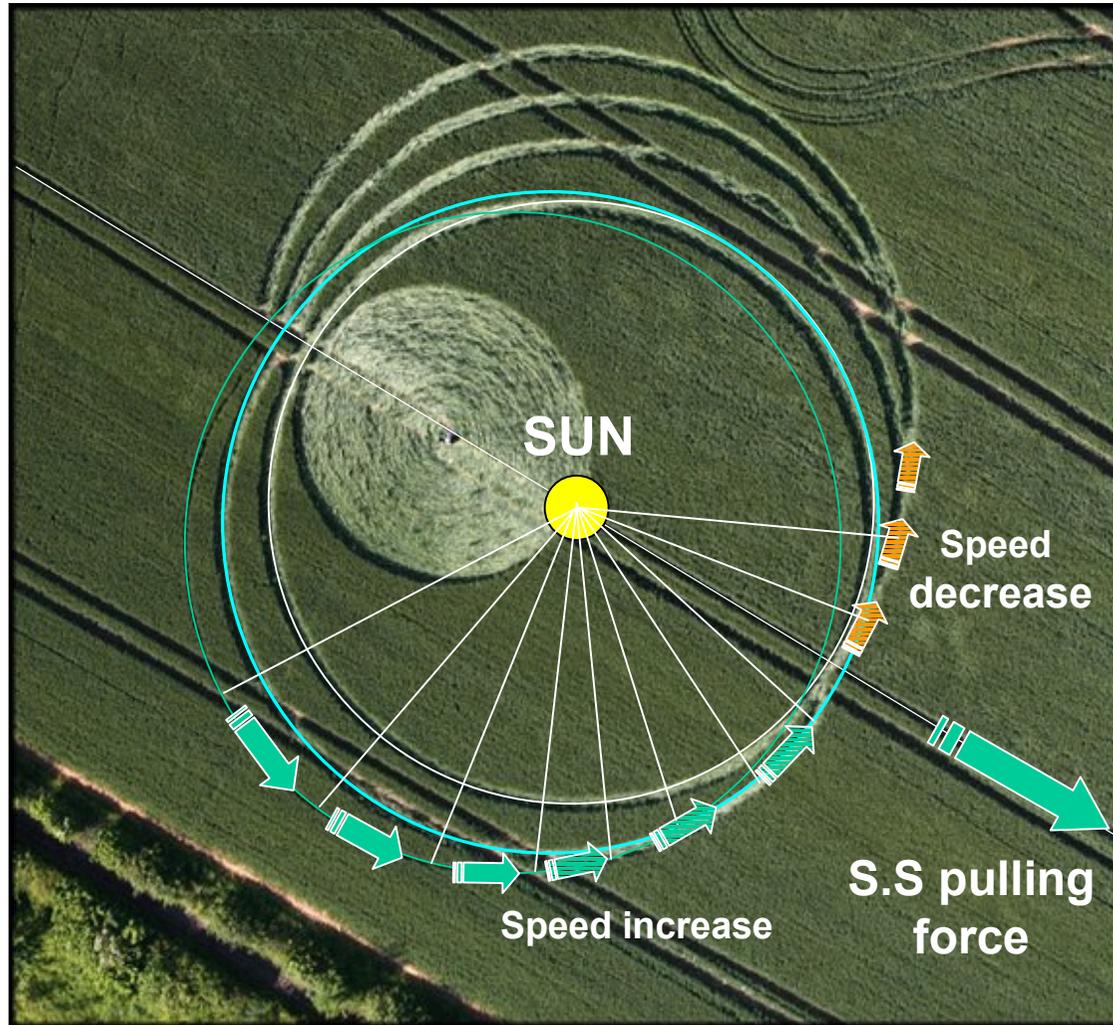

From our knowledge the 21st December should be around here
The Sun distance is “NEARLY NORMAL”: 158 Mil Km
instead of 147 or 152 in normal July.

We will see, the matter is tough, the references gone, scientist
folished out and only few knows.

THE EARTH ORBIT SHIFTING MOVEMENTS

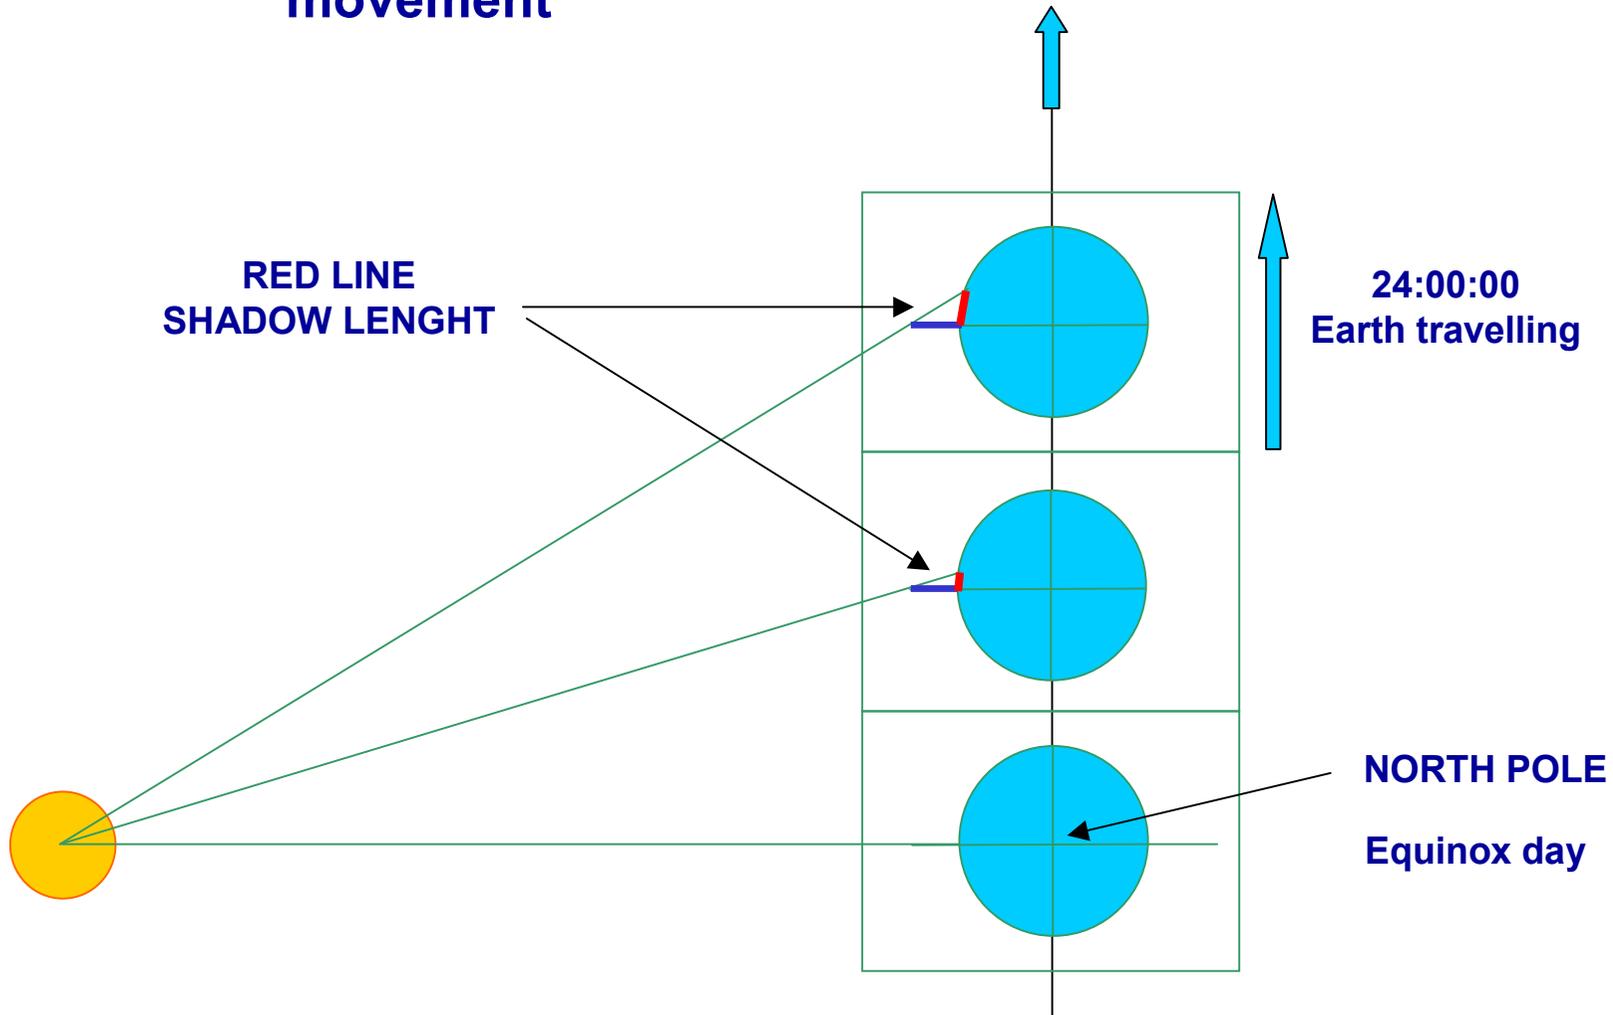

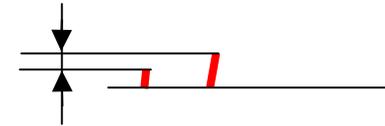

The orbital speed changes

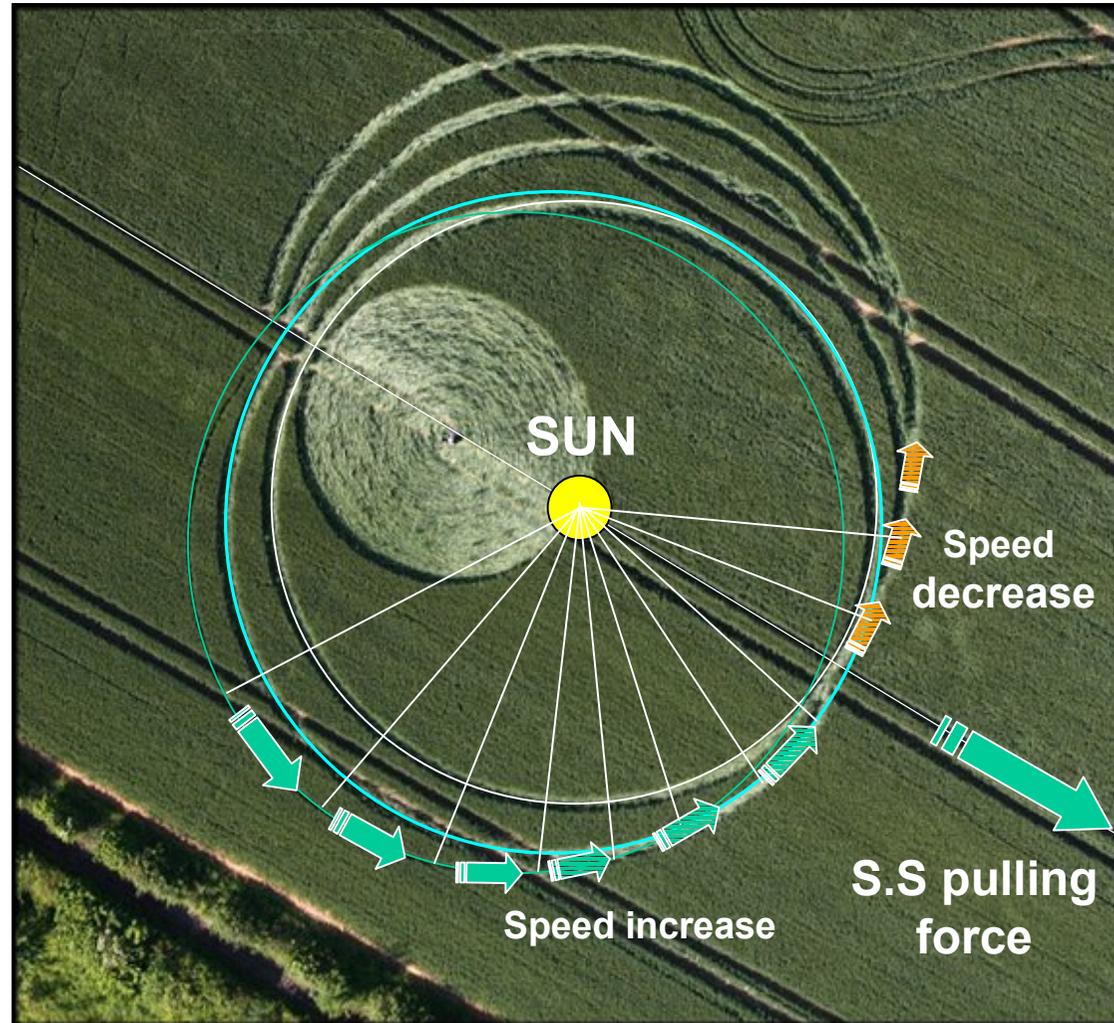

ORBIT PLANE TOP VIEW

Simplify to understand.
Note this straight example
simulte also the day by day
Earth axis apparent
movement

Normal Earth speed Shadow lenght difference

When the intersection point with the Second SUN direction will be overpassed, the situation should invert

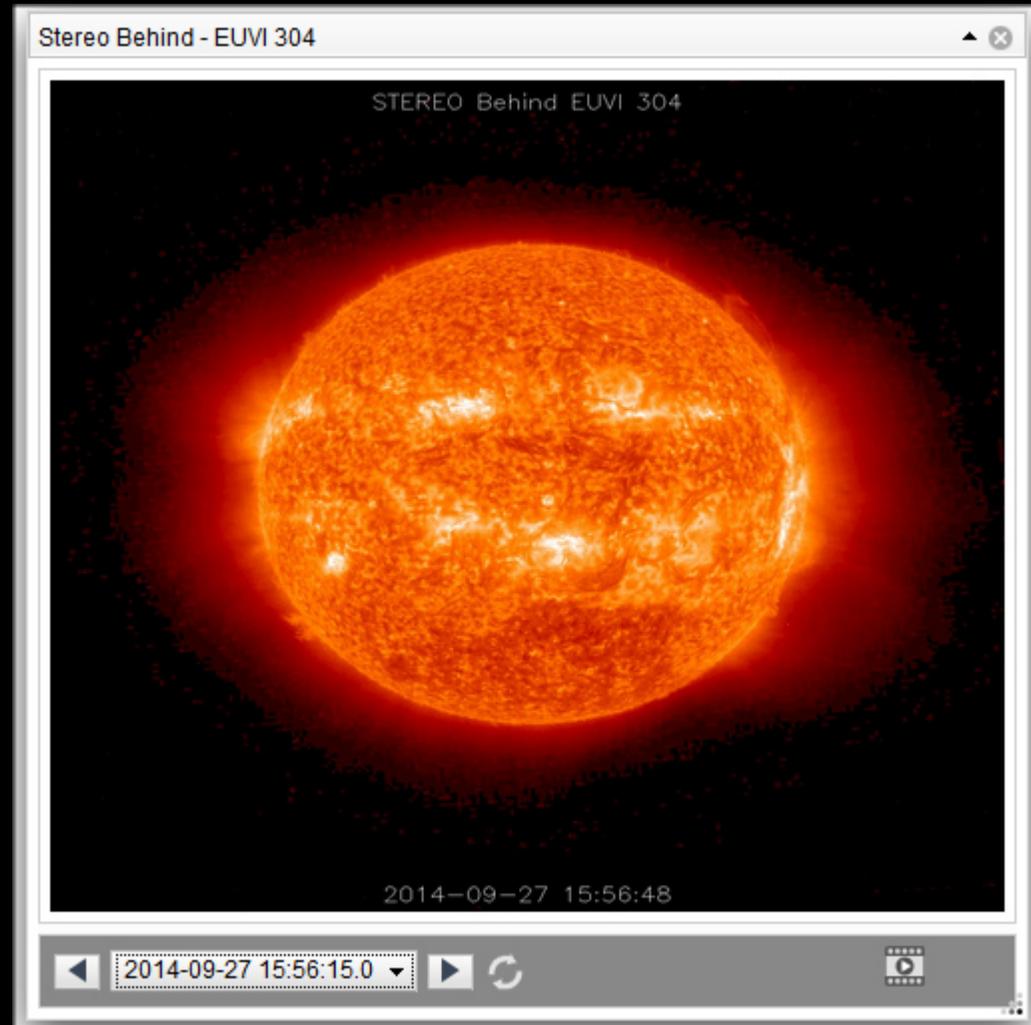

The NASA Solar FLARE MONITOR images are not available onward the 27 sept 2014. WHY? Good question

<http://iswa.ccmc.gsfc.nasa.gov/IswaSystemWebApp/>

And what about the SOHO?

https://sohodata.nascom.nasa.gov/cgi-bin/data_query_search_movie

DID YOU NOTE ANYTHING ELSE NEW on the 21st-6-2015 crop?

The Earth distance at 13-5-2017 is set to 120,3 Mil Km. Not exactly the VENUS distance from the SUN. BUT WE WILL MOVE more.

This is shown on the 2017 CALENDAR already in our hands decoding other crops, where the HOURS/Day will shorten from 16 down to 12 in 1025 Earth hours time, but also shown by the remaining part of the GREEN ORBIT drawn.

We do not know how much Venus will slide its orbit toward the SUN as the Earth will do, so.... We just have to wait to see how big it will be in the sky. The appearance will be a scared matter due to the fact that being in line with the SUN, what is happening during day time will be not visible Suddenly a BLACK DOT will be seen crossing the SUN if the world will be able to sit back and look up instead of running after to... Any other guess up to now, is useless

ONE THING IS SURE

**We are OUT of ORBIT since TIME
The ORBIT PLANE is TILTED
SCIENTIST will be fooled
EVERYTHING IS STARTED**

And the TIME WILL FINISH ON 21st JULY 2017

I don't mind if you believe me. My duty is to advise you, not to save you

**AS SAID
ONE THING IS SURE**

SALVATION IS ONLY THRU catholic church. The TRUTH is only here, EVEN IF THE holy place WILL BE IN THE DISASTER VERY SOON, and the Bergoglio is a serve of the antichrist sent to demolish catholics. Christ will appear soon in the GREAT WARNING to reveal the REAL TRUTH.

At this time

**a “B” PLAN IS NOT CONSIDERED BY GOD THE FATHER
This says the HOLY VIRGIN MARY in her messages**

CONVERSION IS NEED AT A GLANCE

More you wait, more you will be in the Eternal danger even if you do not think so, because you use to model the truth as per your needs
